### **ESD** Precautions

Computer boards have integrated circuits sensitive to static electricity. To prevent chipsets from electrostatic discharge damage, please take care of the following jobs with precautions:

- Do not remove boards or integrated circuits from their anti-static packaging until you are ready to install them.
- Before holding the board or integrated circuit, touch an unpainted portion of the system unit chassis for a few seconds. Doing so can discharge static electricity from your body.
- Wear a grounding wrist strap, available from most electronic component stores, when handling boards and components.

## Section 1 Introduction

The SHB160 PICMG<sup>®</sup> v1.3 full-size Single Board Computer supports an LGA1700 socket for Intel<sup>®</sup> Core i7/ i5/ i3 desktop processors. The transfer rate reaches 4400 MHz. The board integrates an Intel<sup>®</sup> R680E/H610E chipset that delivers outstanding system performance through high-bandwidth interfaces, multiple I/O functions for interactive applications and various embedded computing solutions. There are four 288-pin DDR5 DIMM sockets for dual channel DDR5 4800 MHz with maximum memory capacity up to 128GB support ECC(R680E) /Non ECC memory. The board also features dual 2.5 Gigabit Ethernet, SATA 6Gbps with SATA RAID 0/1/5/10(R680E) by PCH, USB 2.0, and USB 3.2 (Gen1x1/Gen2x1) high speed compliant ports and built-in Intel<sup>®</sup> HD Audio Digital Header to achieve the best stability and reliability for industrial applications.

### 1.1 Features

- LGA1700 socket 12<sup>th</sup>/13<sup>th</sup> Generation Intel<sup>®</sup> Core processors up to 125W
- Intel<sup>®</sup> R680E/H610E PCH
- 4 DDR5 unbuffered DIMM max. up to 128GB memory capacity
- Intel<sup>®</sup> iAMT (R680E/H610 PCH) and TPM2.0 module supported (optional)
- PCIe Gen. 4 at 16GT/s supported
- USB 3.2 (Gen2x1, 10Gbps) supported

### 1.2 Specifications

#### • CPU

- LGA1700 socket 12th/13th Generation Intel® Core™ i7/i5/i3, Pentium® and Celeron® processors (Raptor Lake) up to 125W
- System Chipset
  - Intel<sup>®</sup> R680E
  - Intel<sup>®</sup> H610E

#### CPU Socket

LGA1700 socket

#### • DRAM Transfer Rate

4400 MHz

#### BIOS

AMI BIOS via SPI interface with socket

#### • System Memory

- Four 288-pin DDR5 4400MHz DIMM sockets
- Maximum up to 128GB DDR5 memory
- Supports the memory with ECC function (R680E Only)
- L1, L2, L3 Cache: Integrated in CPU

#### Onboard Multi I/O

- Serial ports: two RS-232/422/485 port in 2x5-pin (pitch=2.54mm) box-header (COM 1/2) and two RS-232 ports in 2x5-pin (pitch=2.54mm) box-header (COM 3/4)
- Parallel Port: one 26-pin 2.54-pitch box-header; SPP/EPP/ECP supported

#### USB Interface

R680E

- Four USB3.2 (Gen1x1) ports on internal box header
- Two USB3.2 (Gen2x1) ports on rear I/O
- Two USB2.0 ports on internal pin header
- One USB2.0 ports with 180D internal type A
- Four USB2.0 ports via SHB connector-C via golden fingers H610E
- Two USB3.2 (Gen1x1) ports on internal box header
- Two USB3.2 (Gen2x1) ports on rear I/O
- Two USB2.0 ports on internal pin header
- Four USB2.0 ports via SHB connector-C via golden fingers

#### • Onboard Graphics

- Integrated Intel<sup>®</sup> UHD graphics supporting DVI-I
- Integrated Intel<sup>®</sup> UHD graphics supporting DisplayPort (internal header)
- DVI/VGA: Max. resolution is 1920x1200 at 60 Hz.
- Internal DP1.4 Connector: Max resolution is 4096 x 2160 at 60Hz. Must use with Axiomtek DP kit.

- Ethernet
  - LAN1/LAN2: Intel® i225LM with iAMT / Intel® i225V Ethernet controller
  - Support 2500/1000/100/10Mbps Gigabit/Fast Ethernet
- Storage
  - Serial ATA:
    - Six SATA 3.0 ports (6Gbps performance) with SATA RAID 0/1/5/10 (R680E) Four SATA 3.0 ports (6Gbps performance) (H610E)
  - One M.2 2280 Key M (R680E Only)
- Audio
  - Supports HD audio interface as a 2x8 pin header
  - Supports audio kit AX93242 with MIC-in/Line-in/speaker-out (option kit)
- Watchdog Timer
  - 1~255 seconds or minutes; up to 255 levels
- Hardware Monitor
  - Monitoring temperatures, voltages and cooling fan status
- Dimensions
  - 338mm x 126mm
- Expansion Interface
  - One PCI-Express x16 (Gen.4)
  - One PCI-Express x4 (or four PCI-Express x1) (Gen.4)
  - Four PCI

All specifications and images are subject to change without notice.

### 1.3 Packing list

- 1 x slot CPU card
- 1 x Driver DVD
- 1 x SATA cable
- 1 x COM cable

\*\*SHB160 series required specially designed cooler "711000001X00", please order as set\*\*

## Section 2 Board and Pin Assignments

### 2.1 Board Layout

Top View

32

26

33

. 31 0

### 2.2 Block Diagram

### 2.3 Jumper Settings

A jumper is a small component consisting of a jumper clip and jumper pins. Install a jumper clip on two jumper pins to close a jumper. Remove the jumper clip from two jumper pins to open a jumper. The following illustration shows how to set up a jumper.

Before applying power to the SHB160 series, please make sure all of the jumpers are in factory default position. Below you can find a summary table and onboard default settings.

Turn off power before changing any default jumper settings.

Jumper	Description	Setting
JP1	Auto Power On Default: Enable	1-2 Close
JP2	Restore BIOS Optimal Defaults Default: Normal Operation	1-2 Close

### 2.3.1 Auto Power On (JP1)

If JP3 is enabled for power input, the system will be automatically powered on without pressing soft power button. If JP1 is disabled for power input, it is necessary to manually press soft power button to power on the system.

Function	Setting	3
Enable auto power on (Default)	1-2 close	2 1
Disable auto power on	2-3 close	1

### 2.3.2 Restore BIOS Optimal Defaults (JP2)

Put jumper clip to pin 2-3 for a few seconds then move it back to pin 1-2. Doing this procedure can restore BIOS optimal defaults.

Function	Setting	3
Normal operation (Default)	1-2 close	2
Restore BIOS optimal defaults	2-3 close	1

### 2.4 Connectors

Signals go to other parts of the system through connectors. Loose or improper connection might cause problems. Make sure all connectors are properly and firmly connected. Here is a summary table showing all connectors on the board.

	Jumpers/Headers/Connectors					
1	ATX Power Connector (CN13)	18	M.2 /E Key (2230)(CN27)			
2	DDR5 Socket (DIMM0.DIMM1)	19	Restore BIOS Optimal Defaults (JP2)			
3	TPM Pin Header (CN7)	20	DEBUG PORT Connector(CN21)			
4	FAN Connector (FAN2)	21	Internal USB 2.0 Connector(CN23)			
5	FAN Connector (FAN3)	22	Internal USB 3.2 Gen1x1 Connector (CN25)			
6	Parallel Port Connector (CN2)	23	Internal USB 3.2 Gen1x1 Connector(CN24)			
7	COM Connector (COM1)	24	Front Panel Connector (CN26)			
8	COM Connector (COM2)	25	FAN Connectors (CPU Fan)			
9	COM Connector (COM3)	26	M.2 2280 Key M NVMe SSD (CN34)			
10	COM Connector (COM4)	27	Internal USB 2.0 Connector(CN33)			
11	HD Audio Digital Header For AX93242(CN5)	28	Internal PS/2 Mouse Connector (CN28)			
12	Temperature Sensor Connector (CN15)	29	Internal PS/2 Keyboard Connector (CN29)			
13	Temperature Sensor Connector (CN16)	30	PICMG_1.3 Gold Finger			
14	SATA 3.0 Connector (CN10~CN12/CN17~19)	31	PICMG_1.3 Gold Finger			
15	Auto Power On (JP1)	32	PICMG_1.3 Gold Finger			
16	12th Intel® Alder Lake LGA 1700 socket	33	PICMG_1.3 Gold Finger			
17	Display Port 1.4 Connector (CN30)	34	RTC Battery Socket (BAT1)			

	Rear I/O Jumpers/Headers/Connectors				
35	Ethernet Ports (CN22)	37	DVI-I Connector (CN31)		
36	Ethernet Ports (CN22)	38	Rear I/O I USB 3.2 Gen2x1 Connector (CN35 and CN36)		

#### 2.4.1 Temperature Sensor Connector (CN15 AND CN16) (Optional)

This is a 2-pin connector for temperature sensor (NTC thermistor) interface. The thermistor value should be 10K and its B value is 3435K.

Pin	Signal	
1	Sensor Input	
2	GND	

### 2.4.2 Ethernet Ports (CN22)

The board has two RJ-45 connectors: LAN1 (i226V) and LAN2 (i226LM). Ethernet connection can be established by plugging one end of the Ethernet cable into this RJ-45 connector and the other end (phone jack) to a 2500/1000/100/ Base-T hub.

Pin	1000 Base-T	100/10 Base-T	Description
L1	BI_DA+	TX+	Bidirectional or Transmit Data+
L2	BI_DA-	TX-	Bidirectional or Transmit Data-
L3	BI_DB+	RX+	Bidirectional or Receive Data+
L4	BI_DC+	N.C.	Bidirectional or Not Connected
L5	BI_DC-	N.C.	Bidirectional or Not Connected
L6	BI_DB-	RX-	Bidirectional or Receive Data-
L7	BI_DD+	N.C.	Bidirectional or Not Connected
L8	BI_DD-	N.C.	Bidirectional or Not Connected
A	Speed LED 2500: Green 1000: Orange 100/10: OFF		
в	Active Link LED (Yellow) Off: No link Blinking: Data activity detected		

|--|

|--|

### 2.4.3 Front Panel Connector (CN26)

This is a front panel header (7x2-pin p=2.54mm).

Pin	Signal
1	PWRLED+
2	EXT SPK-
3	GND
4	Buzzer
5	PWRLED-
6	N.C.
7	N.C.
8	EXT SPK+
9	PWRSW-
10	PWRSW+
11	HW RST-
12	HW RST+
13	HDDLED-
14	HDDLED+

#### Power LED

Pin 1 connects anode(+) of LED and pin 5 connects cathode(-) of LED. The power LED lights up when the system is powered on. Pin 3 is defined as GND.

#### **External Speaker and Internal Buzzer**

Pin 2, 4, 6 and 8 connect the case-mounted speaker unit or internal buzzer. While connecting the CPU board to an internal buzzer, please set pin 2 and 4 closed; while connecting to an external speaker, you need to set pins 2 and 4 opened and connect the speaker cable to pin 8(+) and pin 2(-).

#### Power On/Off Button

Pin 9 and 10 connect the power button on a front panel to the CPU board, which allows users to turn on or off power supply.

#### System Reset Switch

Pin 11 and 12 connect the case-mounted reset switch that reboots your computer without turning off the power switch. It is a better way to reboot your system for a longer life of system power supply.

#### HDD Activity LED

This connection is linked to hard drive activity LED on the control panel. LED flashes when HDD is being accessed. Pin 13 and 14 connect the hard disk drive to the front panel HDD LED; pin 13 is assigned as cathode(-) and pin 14 is assigned as anode(+).

### 2.4.4 DVI-I Connector (CN31)

DVI-I (integrated, combining digital and analog in the same connector; digital may be single or dual link) provides transmission of fast and high quality digital video from a source device (graphics card) to a display device.

Pin	Signal	Pin	Signal
1	DVI_DATA2-	2	DVI_DATA2+
3	GND	4	VGA_DDCSCL
5	VGA_DDCSDA	6	DVI_SPC
7	DVI_SPD	8	VGA_VSYNC_ R .
9	DVI_DATA1-	10	DVI_DATA1+
11	GND	12	N.C.
13	N.C.	14	+5V
15	GND	16	DVI_HTPLG
17	DVI_DATA0-	18	DVI_DATA0+
19	GND	20	N.C.
21	N.C.	22	GND
23	DVI_CLK+	24	DVI_CLK-
C1	Analog red	C2	Analog green
C3	Analog blue	C1	Analog
C5	Analog ground	04	horizontal sync

#### 2.4.5 Internal USB 2.0 Connectors (CN33)

These are 5x2-pin P=2.54mm headers for USB 2.0 interface.

Pin	Signal	Pin	Signal			1.
1	USB2_PWR78	2	USB2_PWR78	1		ľ
3	USB_IN	4	USB _JN	3	00	4
5	USB_IP	6	USB_JP	5	00	6
7	GND	8	GND	7	00	8
		10	GND		0	10

#### 2.4.6 Rear I/O USB 3.2 (Gen2x1, 10Gbps) Connectors (CN35 and CN36)

These are standard USB (Universal Serial Bus) 3.0 connectors on the rear I/O for connecting USB peripherals such as a keyboard, mouse, scanner, etc.

Pin	Signal
1	USB3_PWR12
2	D-
3	D+
4	GND
5	StdA_SSRX-
6	StdA_SSRX+
7	GND_DRAIN
8	StdA_SSTX-
9	StdA_SSTX+

CN35: USB 3.2 port 0 CN36: USB 3.2 port 1

#### 2.4.7 Internal PS/2 Keyboard and Mouse Connectors (CN28 and **CN29)**

The board has two 5-pin connectors for PS/2 keyboard (CN29) and mouse (CN28) interfaces.

Pin	Signal
1	Clock
2	DATA
3	No connector
4	GND
5	+5VDUAL

1

3	0
4	0
5	Оζ

### 2.4.8 COM Connectors (COM1~COM4)

This is a 10 pin (Pitch = 2.54mm) connector which is compliant with CATCH 1137-000-10S. and it supports RS-232/RS-422/RS-485 mode operation for COM1 ~ COM4. See the table below for the pin assignments.

Pin	RS-232	RS-422	RS-485
1	Data Carrier Detect (DCD)	тх-	DATA-
2	Data Set Ready (DSR)	No connector	No connector
3	Receive Data (RXD)	TX+	DATA+
4	Request to Send (RTS)	No connector	No connector
5	Transmit Data (TXD)	RX+	No connector
6	Clear to Send (CTS)	No connector	No connector
7	Data Terminal Ready (DTR)	RX-	No connector
8	Ring Indicator (RI)	No connector	No connector
9	Ground (GND)	GND	GND
10	Disconnect (NI)	NI	NI

9 10	00000	1
10	00000	Z

### 2.4.9 FAN Connectors (CPU FAN, FAN2 and FAN3)

Fans are needed for cooling down CPU and system temperature. The board has three fan connectors. You can find fan speed option(s) at BIOS Setup Utility if fan is installed via either connector. For further information, see BIOS Setup Utility: Advanced\HW Monitor\PC Health Status.

Auxiliary and system fan interfaces are available through FAN2 and FAN3. See the table below.

Pin	Signal	
1	GND	
2	+12V level	
3	Rotation detection	
4	Speed Control	

CPU fan interface is available through CPU FAN. See the table below.

Pin	Signal	
1	Ground	
2	+12V	
3	Rotation Detection	
4	Speed Control	

4			1
0	0	0	0

### 2.4.10 SATA 3.0 Connectors (CN10~CN12/CN17~19)

These Serial Advanced Technology Attachment (Serial ATA or SATA) connectors are for high-speed SATA 3.0 interfaces. They are computer bus interfaces for connecting to devices such as hard disk drives.

This board has six SATA 3.0 ports with speed at 6Gb/s.

Pin	Signal
1	GND
2	SATA_TX+
3	SATA_TX-
4	GND
5	SATA_RX-
6	SATA_RX+
7	GND

### 2.4.11 Intel<sup>®</sup> HD Audio Digital Header (CN5)

This is a 2x8-pin header for connecting an external HD Audio board (AX93242).

Pin	Signal	Pin	Signal
1	BCLK	2	GND
3	RST#	4	DVDD_IO

15							1
0	0	0	0	0	0	0	
0	0		0	0	0	0	0
16							2

### 2.4.12 ATX Power Connector (CN13)

Steady and sufficient power can be supplied to all components on the board by connecting the power connector. Please make sure all components and devices are properly installed before connecting the power connector.

The external power supply plug fits into this connector in only one orientation. Properly press down the power supply plug until it completely and firmly fits into this connector. Loose connection may cause system instability.

The ATX2 is an 8-pin ATX power connector. Its pin assignments are given in table below.

Pin	Signal	Pin	Signal
1	GND	5	+12V
2	GND	6	+12V
3	GND	7	+12V
4	GND	8	+12V

9	SPI_TPM_PP	10	NC
11	NC	12	NC
13	NC	14	MC

13 11 9 7 5 3 1

The screw type is M2\*0.4.

### 2.4.14 Parallel Port Connector (CN2)

This board has a multi-mode parallel port to support:

• Standard Mode:

IBM PC/XT, PC/AT and PS/2<sup>™</sup> are compatible with a bi-directional parallel port.

• Enhanced Mode:

Enhance Parallel Port (EPP) is compatible with EPP 1.7 and EPP 1.9 (IEEE 1284 compliant).

• High Speed Mode:

Microsoft and Hewlett Packard Extended Capabilities Port (ECP) is IEEE 1284 compliant.

Pin	Signal	Pin	Signal

## Section 3 Hardware Installation

### 3.1 Installing the Processor

The LGA1700 processor socket comes with a cover to protect the processor. Please install the processor into the CPU socket step by step as illustrated below:

Make sure that you install the correct CPU only designed for the LGA1700 socket . DO NOT install a CPU designed for LGA1156, LGA1155 or LGA1150 CPU on the LGA1700 socket.

#### Step 1 Opening the socket:

- Disengage the load lever by pressing the lever down and pulling it slightly away by the hook. This will release the load lever from the retention tab.
- Rotate the load lever to open position at approximately 135°.
- Rotate the load plate to open position at approximately 150°.

#### Step 2 Removing the socket protective cover:

- Place the thumb against the front edge of the protective cover and rest the index finger on the rear grip to maintain control of the cover.
- Lift the front edge of the protective cover to disengage from the socket. Keep control of the cover by holding the rear grip with the index finger.
- Lift the protective cover away from the socket. Be careful not to touch the electrical contacts.

#### Step 3 Processor installation:

- Lift the processor package from shipping media by grasping the substrate edges.
- Scan the processor package gold pads for any presence of foreign material. If necessary, the gold pads can be wiped clean with a soft lint-free cloth and isopropyl alcohol.
- Locate connection 1 indicator on the processor which aligns with connection 1 indicator chamfer on the socket, and notice processor keying features that line up with posts along socket walls.

Never touch fragile socket contacts to avoid damage and do not touch processor sensitive contacts at any time during Installation.

• Carefully place the processor into the socket body vertically (see image below).

#### Step 4 Close the socket (see image below):

- Gently lower the load plate.
- Make sure the load plate's front edge slides under the shoulder screw cap as the lever is lowered.
- Latch the lever under the top plate's corner tab, being cautious not to damage the motherboard with the tip of the lever.

#### Step 6 Fan heatsink handling:

1. Orientate the CPU cooling fan to fixing holes on the board.

2. Screw the CPU cooling fan onto the board.

3. Make sure the CPU fan is plugged to the CPU fan connector.

Axiomtek strongly recommends that you choose our verified heat sink or cooler from the optional list on datasheets; we DO NOT recommend that you use the heat sink or cooler without verification, since it may cause damage or bend to the PCBA. Axiomtek's heat sink or cooler has passed our testing including heat dissipation capacity.

For SHB160 series Cooler list: For 1U Chassis: 711000001400 For 2U /4U /Shoebox chassis: 711000001500

\*\*SHB160 series required specially designed cooler "711000001X00", please order as set\*\*

### 

Please always hold the PCBA with two hands by card edges when you install the cooler or heatsink to avoid bending or breaking it; Careless or improper installation of the cooler or heatsink can result in damage and components may snap or come off from the PCBA.

### 

Due to the weight of the cooler may cause the PCBA damage or unexpected issues. In addition, some applications highly require stability and Axiomtek suggests customer use a stand (as the red parts below) to support the cooler to prevent such issues.

If you have any technical problems, please contact our technical window; if there are any requirements for system integration, Axiomtek can provide evaluation and customized services.

### 3.2 Installing the Memory

The board supports four 288-pin DDR5 DIMM memory sockets with maximum memory capacity up to 128GB.

Please follow steps below to install the memory modules:

- Please insert your DDR5 memory modules from the CH0\_DIMM1 slot first.
- Push down latches on each side of the DIMM socket.
- Align the memory module with the socket to ensure that notches of the memory module match the socket keys for a correct installation.
- Install the memory module into the socket and push it firmly down until it is fully seated. The socket latches are levered upwards and clipped on to the edges of the DIMM.
- Install any remaining DIMM modules.

To remove a DIMM, push down the latches on each side of the DIMM socket to loosen the DIMM, and then lift the DIMM carefully.

3

To remove a DIMM

## Section 4 Hardware Description

### 4.1 Microprocessors

The SHB160 Series supports Intel<sup>®</sup> 12th/13th Core<sup>™</sup> i7/ i5/ i3 processors, which enable your system to operate under Windows<sup>®</sup> 11 and Linux environments. The system performance depends on the microprocessor. Make sure all correct settings are arranged for your installed microprocessor to prevent the CPU from damage.

### 4.2 BIOS

The SHB160 Series uses AMI Plug and Play BIOS with a single 256Mbit SPI Flash.

### 4.3 System Memory

The SHB160 Series supports four 288-pin DDR5 DIMM sockets for maximum memory capacity up to 128GB DDR5 SDRAMs. The memory module comes in sizes of 2GB, 4GB, 8GB, 16GB and 32GB.

This page is intentionally left blank.

## Section 5 AMI BIOS Setup Utility

The AMI UEFI BIOS provides users with a built-in setup program to modify basic system configuration. All configured parameters are stored in a flash chip to save the setup information whenever the power is turned off. This chapter provides users with detailed description about how to set up basic system configuration through the AMI BIOS setup utility.

### 5.1 Starting

To enter the setup screens, follow the steps below:

- 1. Turn on the computer and press the <Del> key immediately.
- 2. After you press the <Del> key, the main BIOS setup menu displays. You can access the other setup screens from the main BIOS setup menu, such as the Advanced and Chipset menus.

ſ	Κ	2		
U		• /	J	

*If your computer cannot boot after making and saving system changes with BIOS setup, you can restore BIOS optimal defaults by setting <mark>JP2 (see section 2.3.2)</mark>.* 

It is strongly recommended that you should avoid changing the chipset's defaults. Both AMI and your system manufacturer have carefully set up these defaults that provide the best performance and reliability.

### 5.2 Navigation Keys

The BIOS setup/utility uses a key-based navigation system called hot keys. Most of the BIOS setup utility hot keys can be used at any time during the setup navigation process. These keys include <F1>, <F2>, <Enter>, <ESC>, <Arrow> keys, and so on.

Some of the navigation keys differ from one screen to another.

Hot Keys	Description
→← Left/Right	The Left and Right < Arrow > keys allow you to select a setup screen.
∕↑↓ Up/Down	The Up and Down <arrow> keys allow you to select a setup screen or sub- screen.</arrow>
+– Plus/Minus	The Plus and Minus <arrow> keys allow you to change the field value of a particular setup item.</arrow>
Tab	The <tab> key allows you to select setup fields.</tab>
F1	The <f1> key allows you to display the General Help screen.</f1>
F2	The <f2> key allows you to Load Previous Values.</f2>
F3	The <f3> key allows you to Load Optimized Defaults.</f3>
F4	The <f4> key allows you to save any changes you have made and exit Setup. Press the <f4> key to save your changes.</f4></f4>
Esc	The <esc> key allows you to discard any changes you have made and exit the Setup. Press the <esc> key to exit the setup without saving your changes.</esc></esc>
Enter	The <enter> key allows you to display or change the setup option listed for a particular setup item. The <enter> key can also allow you to display the setup sub- screens.</enter></enter>
## 5.3 Main Menu

The first time you enter the setup utility, you will enter the Main setup screen. You can always return to the Main setup screen by selecting the Main tab. System Time/Date can be set up as described below. The Main BIOS setup screen is shown below.

Main Advance	d Chipset Security (	Aptio Setup – AMI Boot Save & Exit

#### • Administrator Password

This item indicates whether an administrator password has been set (installed or uninstalled).

#### • User Password

This item indicates whether a user password has been set (installed or uninstalled).

#### • Secure Boot

This item is available on the UEFI firmware to provide a secure environment.

# 5.7 Boot Menu

The Boot menu allows users to change boot options of the system.

Main Advanced Chipset :	Aptio Setup – AMI Security Boot Save & Exit	
Boot Configuration Setup Prompt Timeout Bootup NumLock State Quiet Boot Network Stack	<mark>1</mark> [On] [Disabled] [Disabled]	Number of seconds to wait for setup activation key. 65535(0xFFFF) means indefinite waiting.
Boot Option Priorities Boot Option #1	[UEFI: Generic Flash Disk 8.07, Partition 1 (Generic Flash Disk 8.07)]	
		<pre>++: Select Screen 14: Select Item Enter: Select +/-: Change Opt. F1: General Help F2: Previous Values F3: Optimized Defaults F4: Save &amp; Exit ESC: Exit</pre>
	Version 2.22.1284 Copyright (C) 2023	AMI

• Setup Prompt Timeout

Number of seconds to wait for setup activation key. 65535(0xFFFF) means indefinite waiting.

- Bootup NumLock State Use this item to select the power-on state for the keyboard NumLock.
- Quiet Boot Select to display either POST output messages or a splash screen during boot-up.
- Network Stack Use this item to run the BIOS of your device through the internet instead of Hard Drives
- Boot Option Priorities

These are settings for boot priority. Specify the boot device priority sequence from the available devices.

## 5.8 Save & Exit Menu

The Save & Exit menu allows users to load your system configuration with optimal or fail-safe default values.

Aptio Setup – AMI Main Advanced Chipset Security Boot <mark>Save &amp; Exit</mark>	
Save Options Save Changes and Exit Discard Changes and Reset Discard Changes and Reset Save Changes Discard Changes Default Options Restore Defaults Save as User Defaults Restore User Defaults Boot Override UEFI: Generic Flash Disk 8.07, Partition 1 (Generic Flash Disk 8.07)	++: Select Screen 1: Select Item Enter: Select +/-: Change Opt. F1: General Help F2: Previous Values F3: Optimized Defaults F4: Save & Exit ESC: Exit
Version 2.22.1284 Copyright (C) 2023	3 AMI

#### • Save Changes and Exit

When you have completed the system configuration changes, select this option to leave Setup and return to Main Menu. Select Save Changes and Exit from the Save & Exit menu and press <Enter>. Select Yes to save changes and exit.

#### • Discard Changes and Exit

Select this option to quit Setup without making any permanent changes to the system configuration and return to Main Menu. Select Discard Changes and Exit from the Save & Exit menu and press <Enter>. Select Yes to discard changes and exit.

#### • Save Changes and Reset

When you have completed the system configuration changes, select this option to leave Setup and reboot the computer so the new system configuration parameters can take effect. Select Save Changes and Reset from the Save & Exit menu and press <Enter>. Select Yes to save changes and reset.

#### • Discard Changes and Reset

Select this option to quit Setup without making any permanent changes to the system configuration and reboot the computer. Select Discard Changes and Reset from the Save & Exit menu and press <Enter>. Select Yes to discard changes and reset.

### • Save Changes

When you have completed the system configuration changes, select this option to save changes. Select Save Changes from the Save & Exit menu and press <Enter>. Select Yes to save changes.

#### • Discard Changes

Select this option to quit Setup without making any permanent changes to the system configuration. Select Discard Changes from the Save & Exit menu and press <Enter>. Select Yes to discard changes.

#### Restore Defaults

It automatically sets all Setup options to a complete set of default settings when you select this option. Select Restore Defaults from the Save & Exit menu and press <Enter>.

#### • Save as User Defaults

Select this option to save system configuration changes done so far as User Defaults. Select Save as User Defaults from the Save & Exit menu and press <Enter>.

#### • Restore User Defaults

It automatically sets all Setup options to a complete set of User Defaults when you select this option. Select Restore User Defaults from the Save & Exit menu and press <Enter>.

#### Boot Override

Select a drive to immediately boot that device regardless of the current boot order.

This page is intentionally left blank.

# Appendix A Watchdog Timer

# A.1 About Watchdog Timer

Software stability is a major issue in most applications. Some embedded systems are not watched by humans for 24 hours. It is usually too slow to wait for someone to reboot when computer hangs. The systems need to be able to reset automatically when things go wrong. The watchdog timer gives us that solution.

The watchdog timer is a counter that triggers a system reset when it counts down to zero from a preset value. The software starts the counter with an initial value and must reset it periodically. If the counter ever reaches zero which means the software has crashed, the system will reboot.

# A.2 How to Use Watchdog Sample Program

#include "stdafx.h"

## Appendix D iAMT Settings

The Intel® Active Management Technology (Intel® AMT) utilizes built-in platform capabilities and popular third-party management and security applications to allow IT administrators to remotely discover, repair and better protect their networked computing assets, thus significantly improving IT management efficiency.

In order to use Intel<sup>®</sup> AMT you must enter the ME BIOS , change the ME BIOS password, and then select "Intel<sup>®</sup> iAMT" as the manageability feature.

### **Entering Management Engine BIOS Extension (MEBx)**

- 1. Go to AMT configuration to enable the iAMT function.
- 2. After restarting BIOS, exit and enter MEBx Setting.

#### Set and Change Password

- 1. You will be asked to set a password at first login. The default password is "admin".
- 2. You will be asked to change the password before setting ME.
- 3. Confirm your new password while revising. The new password must consist of eight characters, including at least:
  - One upper- case letter
  - One lower- case letter
  - One number
  - One special symbol, such as '!', '\$', ';' (except: ':', ',', '"')

The default demonstrates an example of a valid password: **!!11qqQQ** 

Underline and space are valid characters for the password.

### **iAMT Settings**

1. Select Intel® AMT configuration, enable AMT BIOS features, then restart BIOS.

Advanced	Aptio Setup – AMI	
AMT Configuration		When disabled AMT BIOS
AMT BIOS Features	[Enabled]	<pre>Features are no longer supported and user is no longer able to access MEBx Setup. Note: This option does not disable Manageability Features in FW. **: Select Screen 11: Select Item Enter: Select +/-: Change Opt. ### iAMT Web Console

1. On a web browser, type http://(IP ADDRESS):16992, which directs to iAMT Web.

Example: http://10.1.40.214:16992

2. To log in, you will be required to type in your username and password for access to the Web.

USER: admin (default) PASS: (MEBx password)

#### 3. Enter the iAMT Web.

# Appendix F TPM Module Installation

The TPM 2.0 (Trusted Platform Module 2.0) module is a modularized design applying to the SHB150R and provides enhanced hardware security for the computer. In this appendix you will learn how to install the TPM 2.0 module into the SHB150R. Please read and follow the instructions below carefully.

1. Insert TPM module into the SPI interface of motherboard, as illustrated below.

- 2. There are two ways to confirm whether the TPM Module is installed successfully or not:
  - a. Enter the BIOS setup menu and go to Trusted Computing. The first line will show "TPM2.0 Device Found".

(In the Trusted Computing section, the first line will show "TPM2.0 Device Found", if installation is successful.)

b. In the Windows 10 OS environment, enter Device Manager, and select the item of Security devices. The screen will show "Trusted Platform Module 2.0" if the installation is successful.

c. In the Windows 10 OS environment, enter Control Panel, select the item of BitLocker Drive Encryption, and enter TPM Administration. The screen will show the information below if the installation is successful.
