Safety Precautions

Before getting started, read the following important cautions.

1. Be sure to ground yourself to prevent static charge when installing the internal components. Use a grounding wrist strap and place all electronic components in any static-shielded devices. Most electronic components are sensitive to static electrical charge.
2. Disconnect the power cords from the FDK191 Series before making any installation. Be sure both the system and the external devices are turned OFF. Sudden surge of power could ruin sensitive components. Make sure the NA-550 Series is properly grounded.
3. Do not open the system's top cover. If opening the cover for maintenance is a must, only a trained technician is allowed to do so. Integrated circuits on computer boards are sensitive to static electricity. To avoid damaging chips from electrostatic discharge, observe the following precautions:
 - Before handling a board or integrated circuit, touch an unpainted portion of the system unit chassis for a few seconds. This will help to discharge any static electricity on your body.
 - When handling boards and components, wear a wrist-grounding strap, available from most electronic component stores.

Chapter 1

Introduction

This chapter contains general information and detailed specifications of the FDK172-834 series. Chapter 1 includes the following sections:

- **General Description**
- **Specification**
- **Dimensions**
- **I/O Outlets**
- **Package List**

1.1 General Description

The FDK series is an open frame touch panel computer, equipped with a 17-inch TFT LCD display and low power consumption Intel® Atom™ processor J1900 2.0 GHz. The panel computer is able to install a CompactFlash™ card and provide a Mini card slot for wireless module. This slim series is designed for immediate integration and can be widely deployed in indoor kiosk, HMI automation, and many more applications. Its slim ID can fit into any space or encased in any chassis. FDK172-834 comes with a front panel open frame design.

Other than offering above configuration advantages, this open frame panel computer series also highlights an ultra slim profile and compact footprint in thickness. Moreover, the brightness adjustment knob located on the back cover makes maintenance easier and faster. For WiFi & 3G connection, this slim unit incorporates a Mini Card slot for expansion capability.

FDK172-834 utilizes one 204-pin DDR3 1066 SODIMM system memory max. up to 8GB, one SATA HDD and one CFast or mSATA. It provides over-current protection-fuse and a full set of I/O including VGA, RS-232/422/485, USB 2.0, USB 3.0, audio (line-out), and Gigabit Ethernet.

1.2 Specifications

Main CPU Board

- **CPU**
 - Intel® Atom™ J1900 2.00GHz processor onboard
- **System Memory**
 - One 204-pin DDR3L 1333MHz SO-DIMM socket
 - Maximum memory up to 8GB
- **BIOS**
 - America Megatrends BIOS

I/O System

- **Standard I/O**
 - 4 x RS-232/422/485
 - 2 x USB 2.0, 2 x USB 3.0
 - 1 x VGA
- **Ethernet**
 - 1 x INTEL I210IT RJ45 for Giga Ethernet
- **Audio**
 - 1x Line-out
- **Expansion**
 - 2 x Full size Mini-card slot
- **Storage**
 - 1 x 2.5" SATA HDD
 - 1 x CFAST or 1 x mSATA
- **Power connector**
 - 12V DC power jack type, 24V DC phoenix type

Note: When FDK172-834 connects to display via VGA port, LVDS will be turned off and shown on VGA display during start the system. After installing graphics driver, FDK172-834 will have dual display.

System Specification

- **17" SXGA(1280x1024) TFT LCD**
- **Touch (equip on FDK172-834-R models)**
 - 5-wired resistive touch
- **Heat Dispensing Design**
- **Disk drive housing**
 - One 2.5" SATA drive
- **Net Weight**
 - 5.52 Kgs (12.16 lb)
- **Dimension (Main Body Size)**
 - 367x 65x 304.5 mm
- **Operation Temperature**
 - 0°C to 50°C
- **Relative Humidity**
 - 10% to 90% @ 40°C, Non-Condensing
- **Power input**
 - 12~36VDC
 - 100-240V AC-DC 60W power adapter

NOTE All specifications and images are subject to change without notice.

NOTE If the operation temperature is higher than 40°C, the wide temperature DRAM/HDD/CF are recommended to be used on the device.

NOTE LVDS is the primary display.

1.4 I/O Outlets

Please refer to the following illustration for I/O locations of the FDK172-834.

No	Function	No	Function
1	POWER SWITCH (ATX)	7	COM 2 (RS-232/422/485)
2	POWER CONNECTOR	8	1 X VGA
3	2 X USB 2.0	9	1 X ETHERNET (RJ-45)
4	COM 3 (RS-232/422/485)	10	2 X USB 3.0
5	COM 4 (RS-232/422/485)	11	1 X AUDIO (LINE-OUT)
6	COM 1 (RS-232/422/485)		

1.5 Packing List

When you receive the FDK172-834, the bundled package should contain the following items:

- **FDK172-834 unit x 1**
- **Driver CD x1**
- **Power adaptor x 1 (for 12V DC Power Jack type only)**
- **Phoenix terminal x 1 (for phoenix type only)**

If you can not find the package or any items are missing, please contact Axiomtek distributors immediately.

Chapter 2

Hardware and Installation

The FDK172-834 provides rich I/O ports and flexible expansions for you to meet different demand, for example CF card. The chapter will show you how to install the hardware. It includes:

- **Open and close back cover**
- **CompactFlash™ Card**
- **Serial Port**
- **Ethernet**
- **Mounting Method**
- **Hard disk**
- **DRAM**
- **Wireless LAN Card**
- **SBC87834 jumpers and connectors**

2.1 Open and close back cover

This section tells users how to open and close the back cover. Please follow the steps below.

Step 1 Unscrew eleven screws on the back cover. Please refer the photo of top side, right side and left side.

Step 2 When users open the back cover, there is a cable connecting between a fan and the motherboard.

Step 3 Remove the connector first before remove the back cover totally.

Step 4 After removing the back cover, users can see the inside of the unit.

Step 5 Before closing the back cover, users must connect the fan cable to the motherboard first.

Step 6 Then close back cover and fix back the eleven screws.

2.2 CFast card Installation

The FDK172-834 provides one CFast slot for users to install CFast card. Please refer to the following instructions for installation:

Step 1 Turn off the system, and unplug the power cord.

Step 2 Locate the CFast socket, and insert the card into the socket.

2.3 Serial Ports Interface

The FDK172-834 has four RS-232/422/485 serial ports.

2.3.1 COM port Connector

The pin assignment of RS-232/RS-422/RS-485 is listed on the following table.

Pin	RS-232	RS-422	RS-485
1	DCD	TX-	Data-
2	RXD	TX+	Data+
3	TXD	RX+	No use
4	DTR	RX-	No use
5	GND	GND	GND
6	DSR	No use	No use
7	RTS	No use	No use
8	CTS	No use	No use
9	RI	No use	No use

2.4 Ethernet

The FDK172-834 is equipped with a high performance Plug and Play Ethernet interface, full compliant with IEEE 802.3 standard, and can be connected with a RJ-45 LAN connector. Please refer to detailed pin assignment list below:

Pin	Signal
1	TX+ (Data transmission positive)
2	TX- (Data transmission negative)
3	Rx+(Data reception positive)
4	RJ45 termination
5	RJ45 termination
6	Rx- (Data reception negative)
7	RJ45 termination
8	RJ45 termination

RJ-45

2.5 Mountings: Openframe/VESA

There are two mounting ways for the FDK172-834 series, openframe and VESA mountings.

2.5.1 Openframe Mount

The FDK172-834 series can be mounted into the wall or put on customized front bezel. Please follow the steps below to for the open frame mounting installation.

Step 1 Users need to prepare the front bezel/wall, screws, nuts, sponge, and L-type holders by themselves.

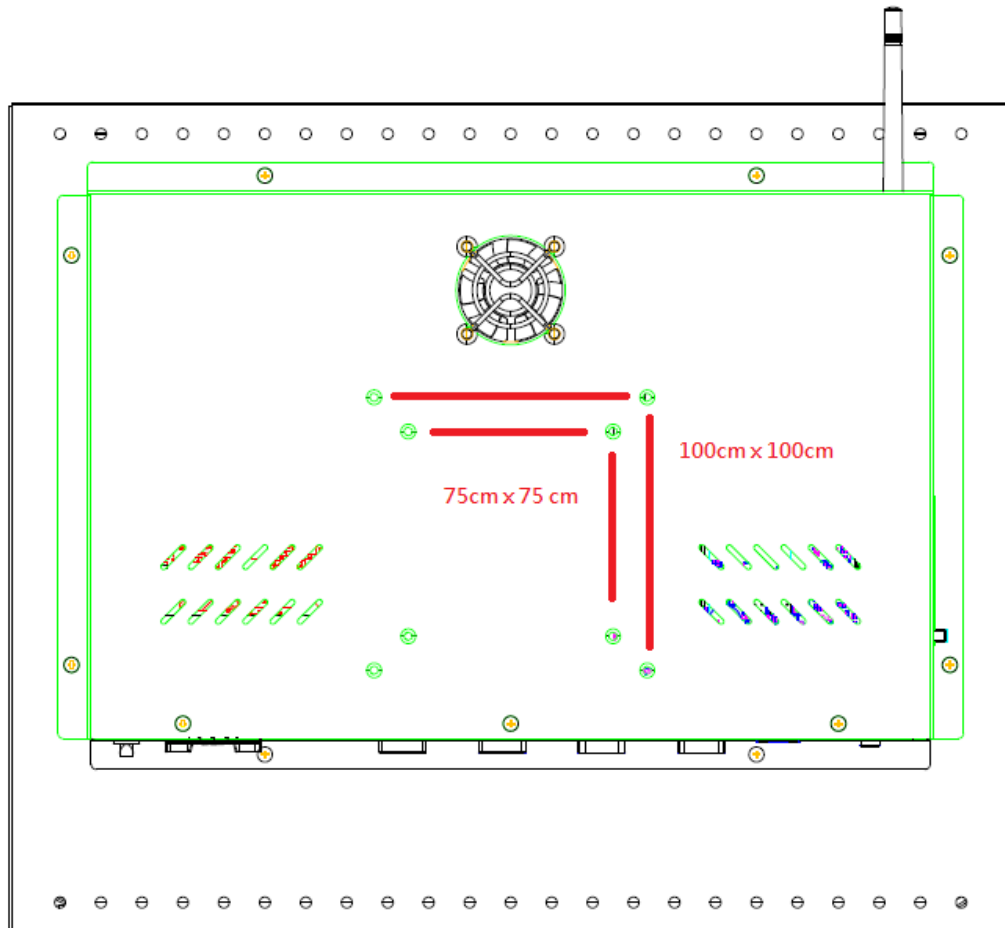

Step 2 Follow section 1.4 dimensions and drawing below. Place the FDK172-834 unit on the front bezel or wall.

Step 3 Screw the FDK172-834 to fix it.

2.5.2 VESA Mounting

FDK172-834 series provides two types of VESA holes, 75mm x 75mm and 100mm x 100mm. These VESA holes can easy for users to install FDK172-834 series via many different types of VESA mounting holders, such as VESA arm, VESA wall holders...etc.

2.6 HDD Installation

The FDK172-834 provides a convenient Hard Disk Drive (HDD) bracket for users to install 2.5" SATA HDD. Please follow the steps:

Step 1 Refer section 2.1 to open the back cover.

Step 2 Unscrew 4 screws to take off the HDD bracket.

Step 3 Fix the HDD on bracket by 4 screws, and connect SATA cable as well as power cable.

- Step 4** Fix the HDD bracket into the system, and plug the data and power cable to HDD. Installation completes.

2.7 DRAM Installation

The FDK172-834 provides one 204-pin DDR3 SODIMM socket that support system memory up to 4GB. Please follow steps below to install the memory modules:

Step 1 Refer to section 2.1 to open the back cover and find out DIMM socket on mainboard (SBC87832).

Step 2 Insert the DRAM to the DIMM socket, and then push it down firmly until it is clipped by the socket.

Step 3 Installation completes.

2.8 Mini cards installation

2.8.1 Wireless LAN card installation

The FDK172-834 provides two Mini card slots for user to install wireless LAN cards. You can choose either slot 1 or slot 2 to install the wireless LAN card and refer to the following instructions and illustration:

Step 1 Refer to section 2.1 to open the back cover and find out mini-card slot on mainboard.

Step 2 Insert the wireless LAN card to the slot. Push it down firmly until it is clipped by the slot.

Step 3 Remove the antenna plug from the top of back cover.

Step 4 Install the antenna cable on the back cover.

Step 5 Install the antenna on the antenna connector.

Step 6 Connect the antenna cable to wireless LAN card.

2.8.2 mSATA Card Installation

The FDK172-834 provides one Mini card slot for user to install mSATA. Please choose the slot 2 when installing the mSATA card and refer to the following instructions and illustration:

Step 1 Refer to section 2.1 to open the back cover and find out mini-card slot on mainboard.

Step 2 Insert the mSATA card to the slot 2. Screw it firmly on the slot.

 **NOTE** Please set the jumper JP6 in 2-3 when using the mSATA.

 **NOTE** The screws of mini card slots are M12 type.

 **NOTE** CFast or mSATA only can be chosen one of each for storage.

2.9 SBC87834 Jumpers and Connectors

Component Side

Solder Side

2.9.1 Jumper Settings

Making the proper jumper settings configure the **SBC87834** to match the needs of your application.

The following table shows the default jumper settings for the onboard devices.

Jumper	★ Default Setting	Jumper Setting
JP1	★ Panel backlight control PWM mode Panel backlight control DC mode	Short 1-2 Short 3-4
JP2	Touch Controller 4,8 WIRE ★ Touch Controller 5 WIRE	Short 1-2 Short 2-3
JP4	★ LVDS Panel Power : 3.3V LVDS Panel Power : 5V	Short 1-2 Short 2-3
JP5	Touch OFF ★ Touch ON	Short 1-2 Short 2-3
JP6	★ PCIe device mSATA device	Short 1-2 Short 2-3
JP7	AT mode ★ ATX mode	Short 1-2 Short 2-3
JP8	★ Normal Clear CMOS	Short 1-2 Short 2-3
JP11	COM3_5VSB ★ COM3_5V	Short 1-2 Short 2-3

JP15	★ COM4 normal mode COM4 pin1 with power :+5V COM4 pin9 with power :+12V	Short 3-5,4-6 Short 1-3,4-6 Shot 3-5,2-4

2.9.2 Connectors

The connectors allow the CPU Board to connect with other parts of the system. Ensure that all connectors are in place and firmly attached. The following table lists the function of each connector on the **SBC87834**.

Connectors	Label
LVDS connector	CN1
LVDS inverter connector	CN2
TOUCH connector	CN3

Chapter 3

AMI BIOS Setup Utility

This chapter provides users with detailed description how to set up basic system configuration through the AMIBIOS8 BIOS setup utility.

3.1 Navigation Keys

The BIOS setup/utility uses a key-based navigation system called hot keys. Most of the BIOS setup utility hot keys can be used at any time during the setup navigation process. These keys include <F1>, <F2>, <F3>, <F4>, <Enter>, <ESC>, <Arrow> keys, and so on.

NOTE Some of navigation keys differ from one screen to another.

< Left/Right	The Left and Right <Arrow> keys allow you to select a setup screen.
↑↓ Up/Down	The Up and Down <Arrow> keys allow you to select a setup screen or sub-screen.
+– Plus/Minus	The Plus and Minus <Arrow> keys allow you to change the field value of a particular setup item.
Tab	The <Tab> key allows you to select setup fields.
F1	The <F1> key allows you to display the General Help screen.
F2	The <F2> key allows you to load previous value
F3	The <F3> key allows you to Load Optimized Defaults.
F4	The <F4> key allows you to save any changes you have made and exit Setup. Press the <F4> key to save your changes.
Esc	The <Esc> key allows you to discard any changes you have made and exit the Setup. Press the <Esc> key to exit the setup without saving your changes.
Enter	The <Enter> key allows you to display or change the setup option listed for a particular setup item. The <Enter> key can also allow you to display the setup sub-screens.

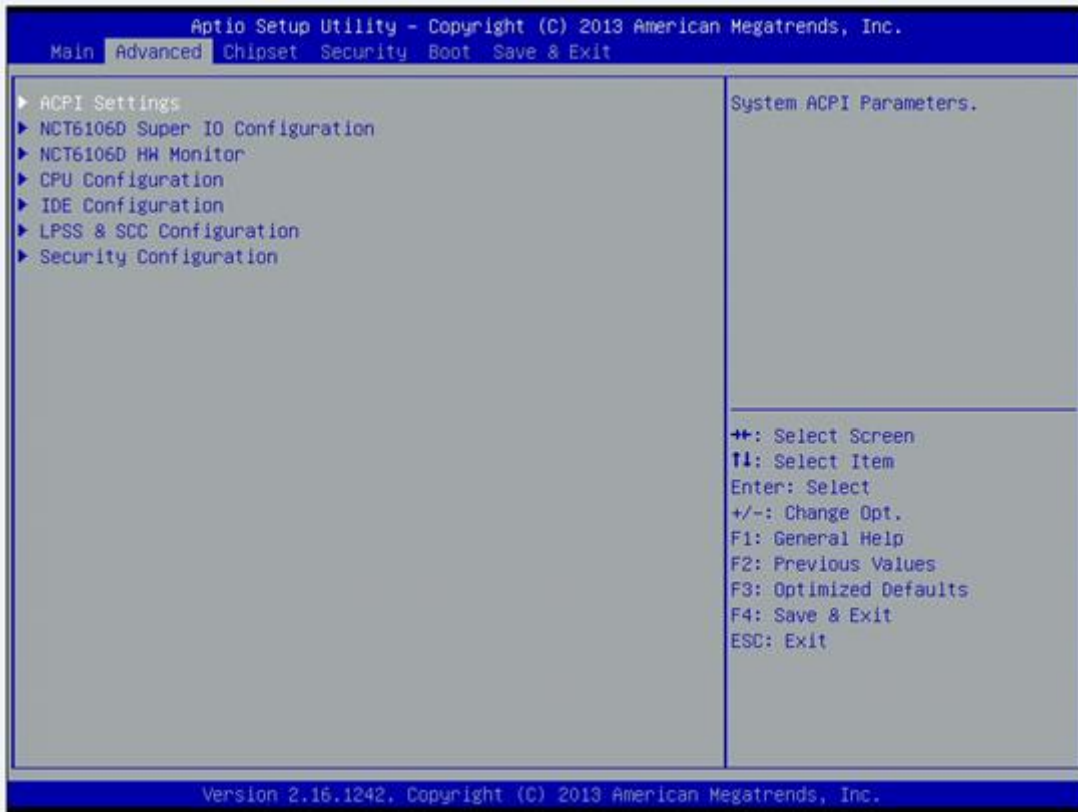

3.2 Main Menu

- **System Time/Date**

Use this option to change the system time and date. Highlight *System Time* or *System Date* using the <Arrow> keys. Enter new values through the keyboard. Press the <Tab> key or the <Arrow> keys to move between fields. The date must be entered in MM/DD/YY format. The time is entered in HH:MM:SS format.

3.3 Advanced Menu

The Advanced menu allows users to set configuration of the CPU and other system devices. You can select any of the items in the left frame of the screen to go to the sub menus:

- ACPI Settings
- NCT6106D Super IO Configuration
- NCT6106D H/W Monitor
- CPU Configuration
- IDE Configuration
- Security Configuration
- LPSS & SCC Configuration

For items marked with “▶”, please press <Enter> for more options.’

- **ACPI Settings**

You can use this screen to select options for the ACPI Configuration, and change the value of the selected option. A description of the selected item appears on the right side of the screen.

- **ACPI Sleep State**

Allow you to select the Advanced Configuration and Power Interface (ACPI) state to be used for system suspend. Here are the options for your selection, Suspend disable and S3 (Suspend to RAM).

- **NCT6106D Super IO Configuration**

Use this screen to select options for the Super IO Configuration, and change the value of the selected option

Serial Port 1-4 configuration

Serial port:

This option used to enable or disable the serial port.

Device Setting:

This item specifies the base I/O port address and Interrupt Request address of serial port.

The port 0 Optimal setting is *3F8/IRQ4*.

The port 1 Optimal setting is *2F8/IRQ3*.

The port 2 Optimal setting is *3E8/IRQ7*.

The port 3 Optimal setting is *2E8/IRQ5*.

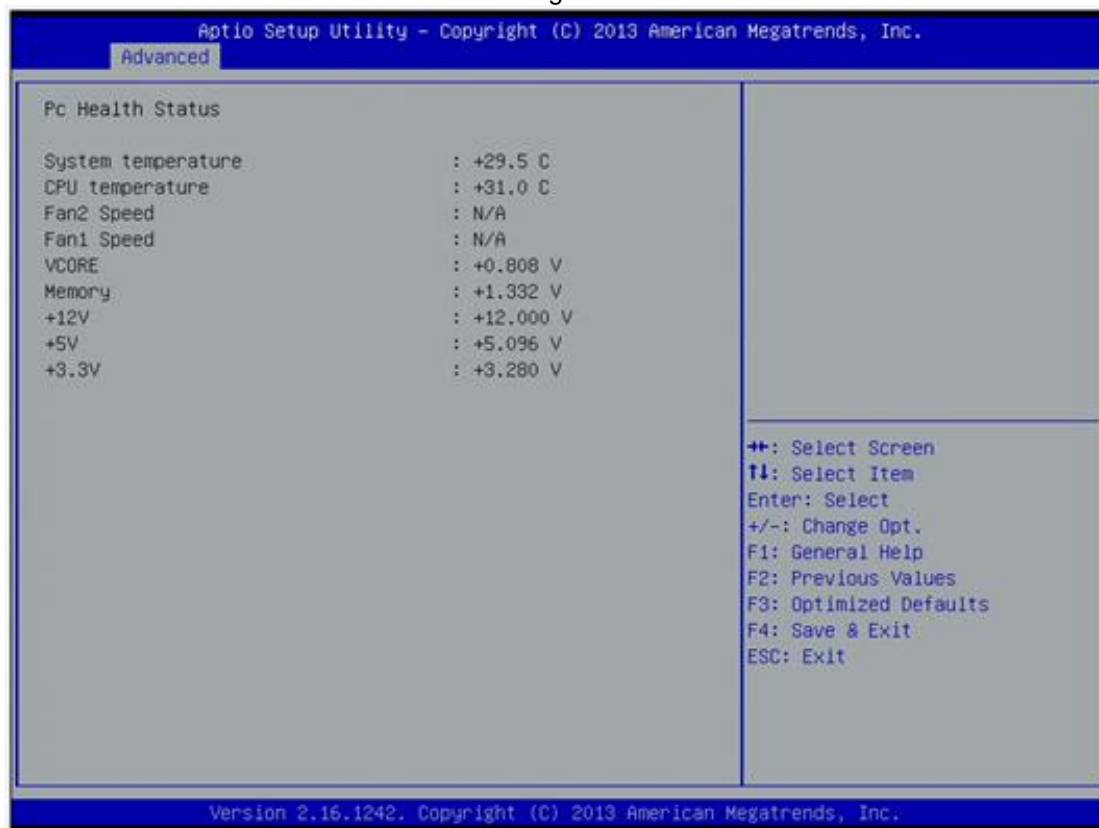

- **Serial type**

This option used to select RS232/422/485 function.

- **NCT6106D H/W Monitor**

This screen shows the Hardware Health Configuration.

- **CPU Configuration**

This screen shows the CPU Configuration and Intel virtualization technology enable/disable selected

- **IDE Configuration**

You can use this screen to select options for the SATA Configuration, and change the value of the selected option.

- **SATA Mode**

Use this item to choose the SATA operation mode. Here are the options for your selection, IDE Mode, AHCI Mode.

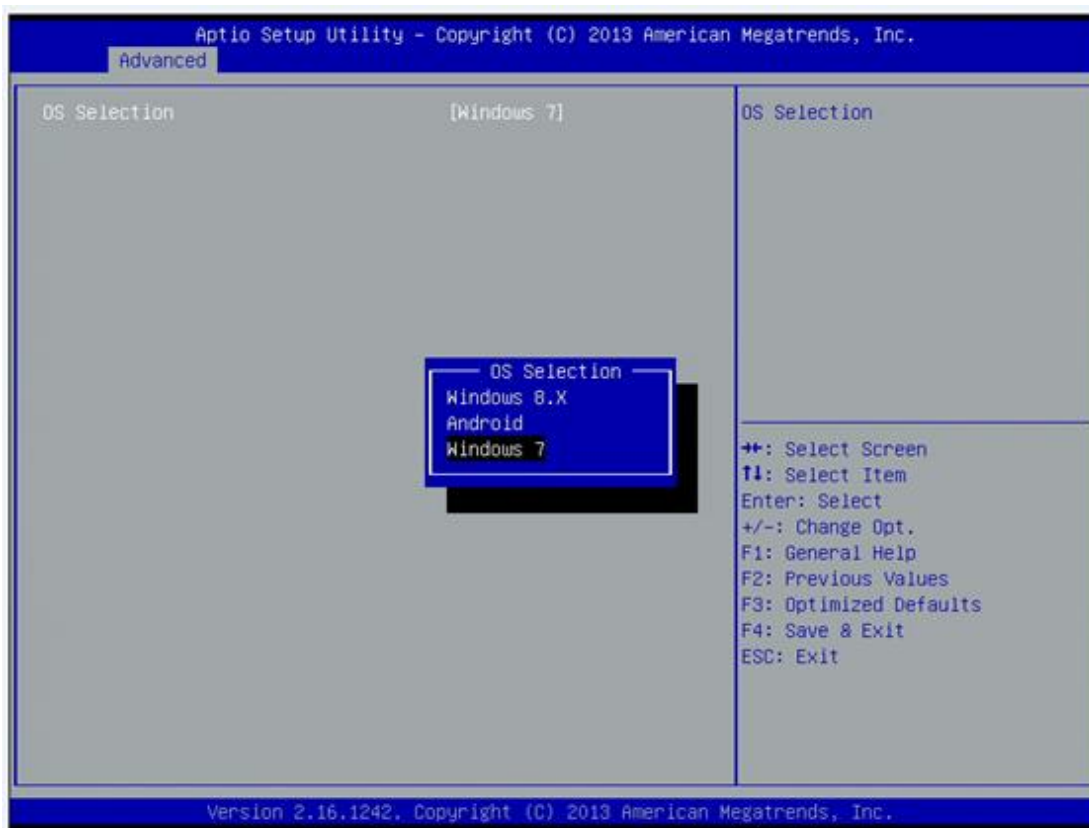

- **Security Configuration**

The Advanced menu allows users to update the TXE firmware.

- **LPSS & SCC Configuration**

You can select any of the items in the frame of the screen to change the OS, the default setting is Win 7.

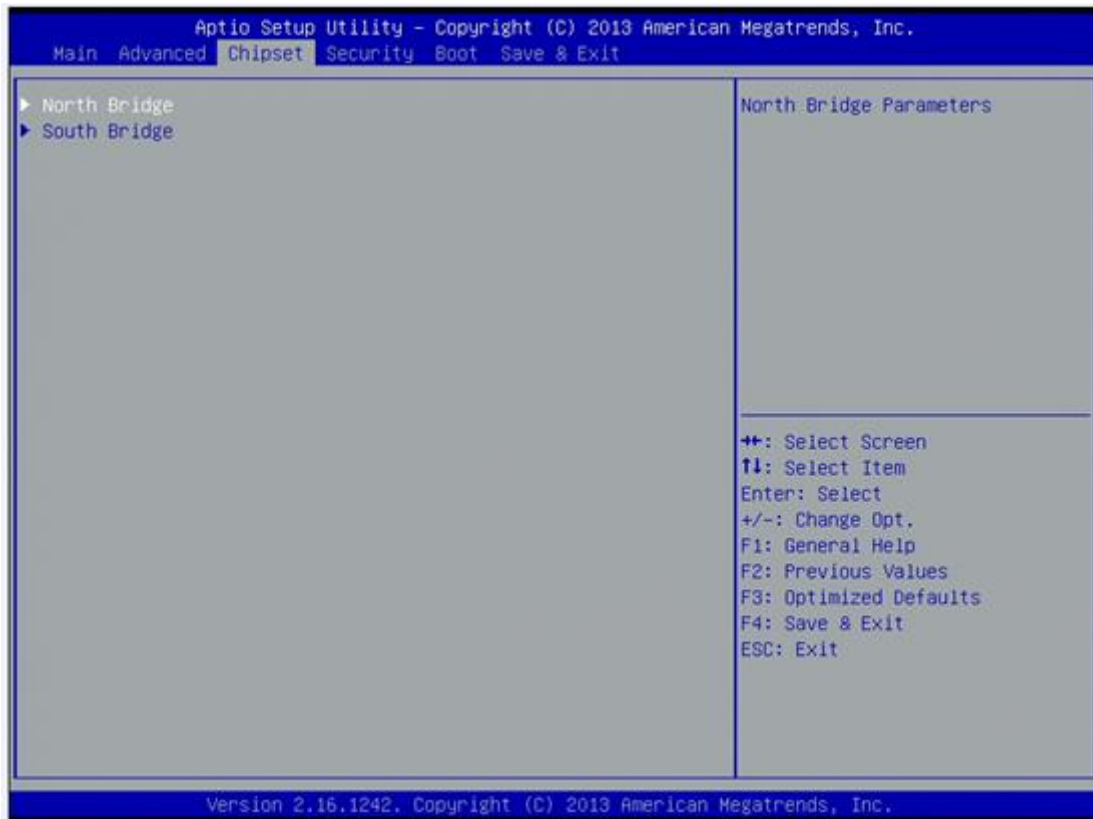

Please be informed to select the Windows 8.x when installing Win 8 or Win 8.1.

- **If using the Android OS, please refer to <https://01.org/android-ia>.**

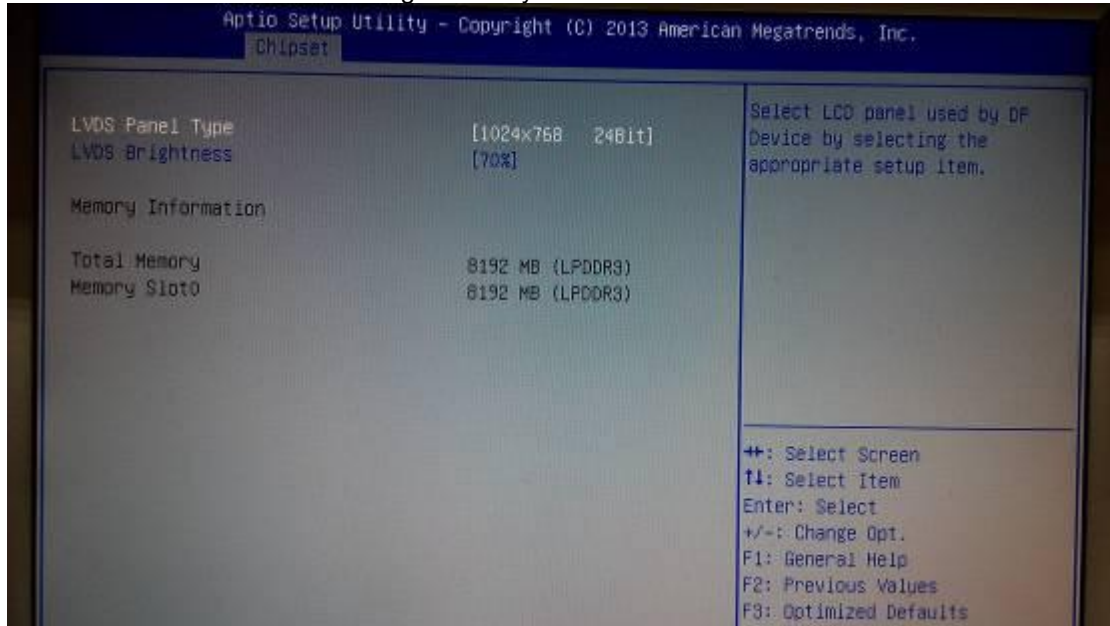

3.4 Chipset Menu

The Chipset menu allows users to change the advanced chipset settings.

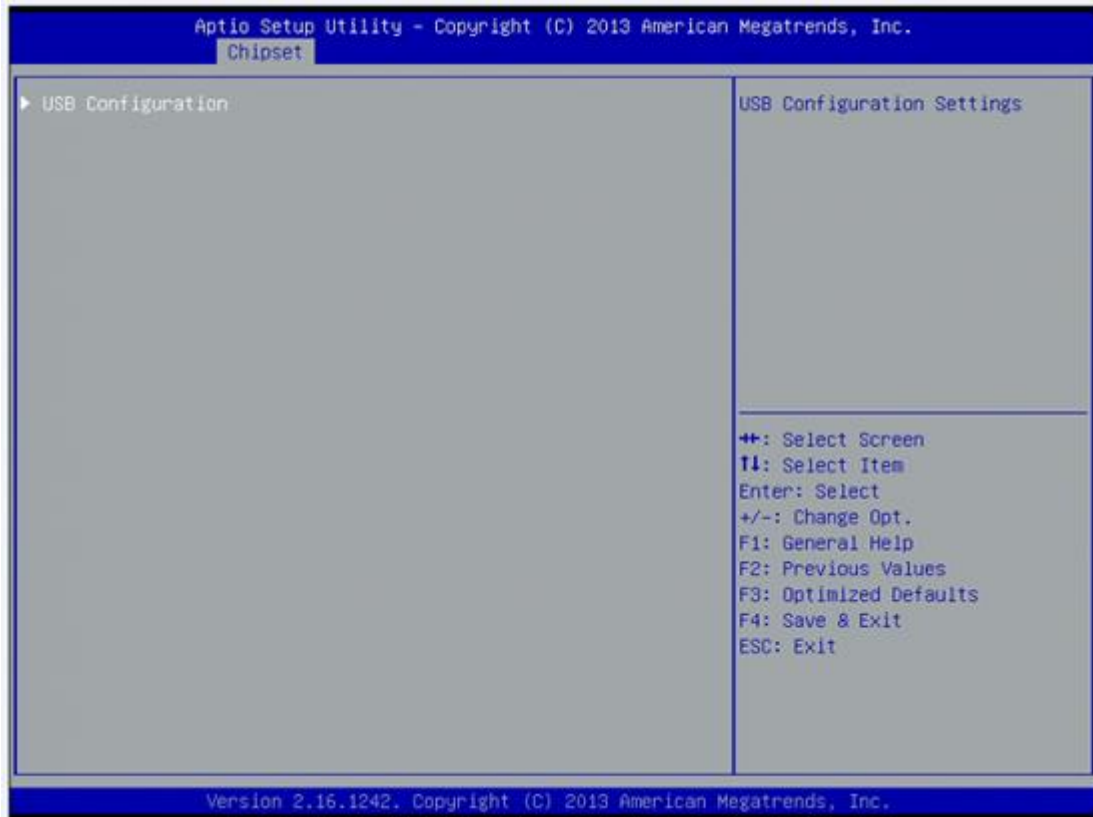

- **North Bridge**

This screen shows the North Bridge memory information.

- **South Bridge**

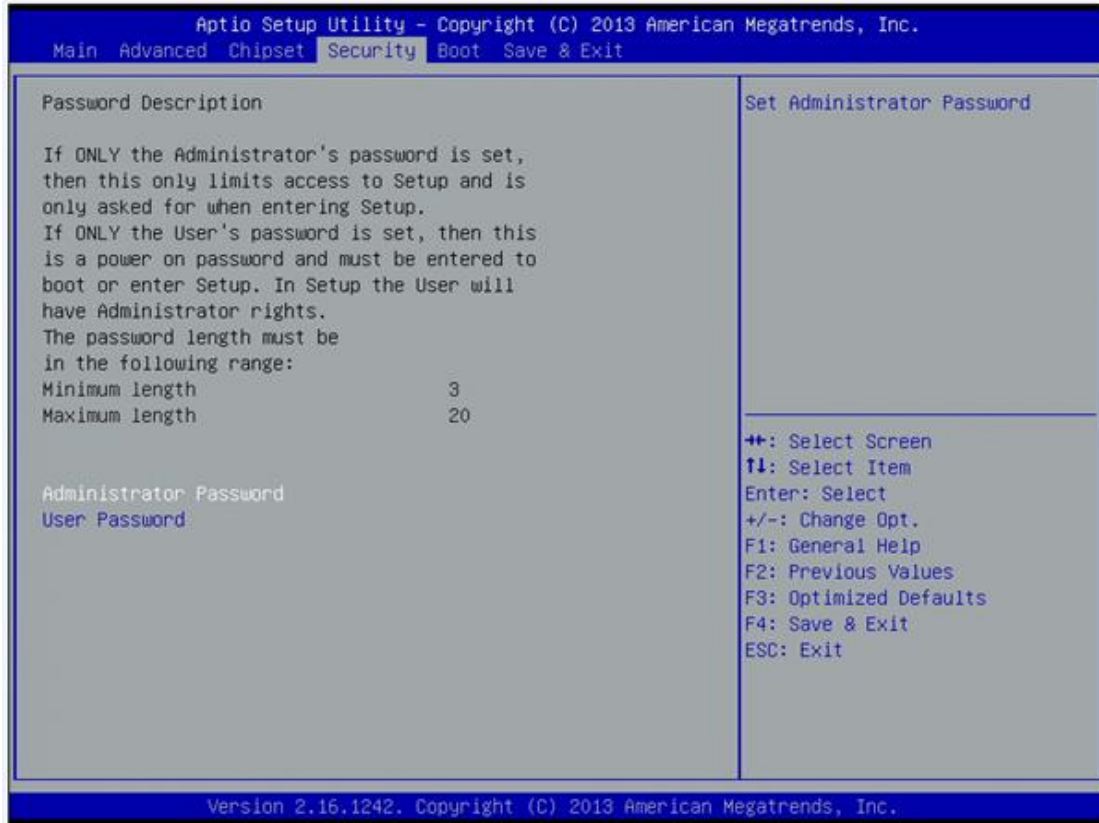

- **USB Configuration**

You can use this screen to select options for the USB Configuration, If USB3.0 function used, XHCI Mode must enable and EHCI must disable.
**XHCI default is Auto.

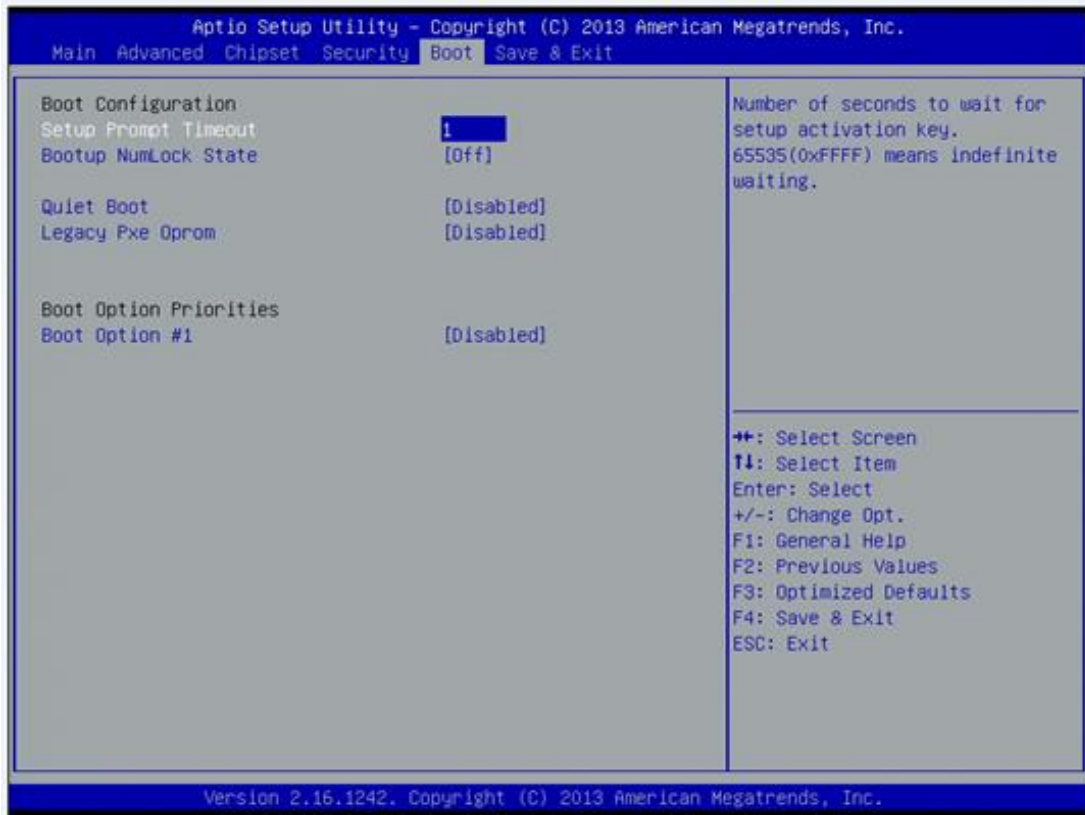

3.5 Security

3.6 Boot Menu

The Boot menu allows users to change boot options of the system. You can select any of the items in the left frame of the screen to go to the sub menus:

Setup Prompt Timeout

Set the Timeout for wait press key to enter Setup Menu.

Bootup NumLock State

Use this item to select the power-on state for the NumLock. The default setting is on.

Quiet Boot

Use this item to enable or disable the Quiet Boot state. The default setting is disable.

Legacy Pxe OPRM

Use this item to enable or disable the reboot Execution Environment. The default setting is disable.

Boot Option Priorities

Specifies the overall boot order from the available devices.

3.7 Save&Exit

This page is intentionally left blank.

Chapter 4

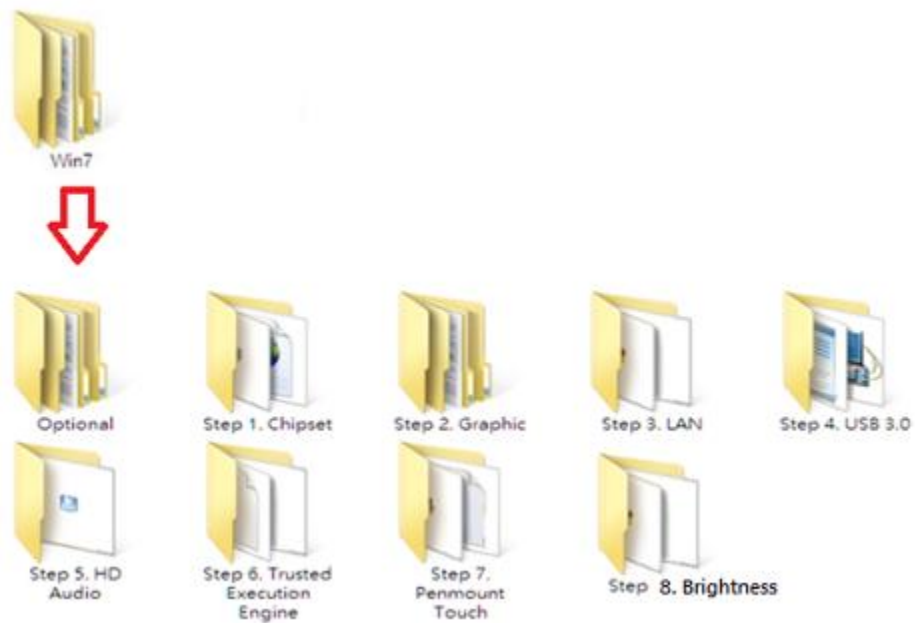

Drivers Installation

4.1 System

GOT5152T-834 supports Windows 7, Windows 8/8.1, WES 7 and WE8S. To facilitate the installation of system driver, please carefully read the instructions in this chapter before start installing.

4.1.1 Win 7

1. Insert Driver CD and select the “\Drivers”.

2. Select all files and follow the installing procedure.

NOTE Please install Microsoft KB2685811 before TXE installation under Windows 7, then installing the drivers.

NOTE If graphic driver isn't installed under Win7 or Win 8.x, only VGA function can be waked up when VGA and DP in hibernate mode. In order to solve this issue, user needs to re-start the computer or ensure the graphic driver is installed properly.

4.1.2 Win 8/8.x

1. Insert Driver CD and select the “\Drivers”.

2. Select all files and follow the installing procedure.

4.2 Touch Screen

The GOT5152T-834 uses the 5-wire analog resistive. There are the specification and driver installation which are listed below.

4.2.1 Specification

Touch Screen	5-wire Analog Resistive type
Touch Screen Controller	PenMount 6000 USB Touch Screen Controller IC
Communications	USB interface
Resolution	1024 x 1024
Power Input	5V
Power Consumption	Active: 24.6mA / Idle Mode: 13.4mA

4.2.2 Driver Installation- Windows 7/8.x

The GOT5152T-834 provides a touch screen driver that users can install it under the operating system Windows 7/8.x. To facilitate installation of the touch screen driver, you should read the instructions in this chapter carefully before you attempt installation.

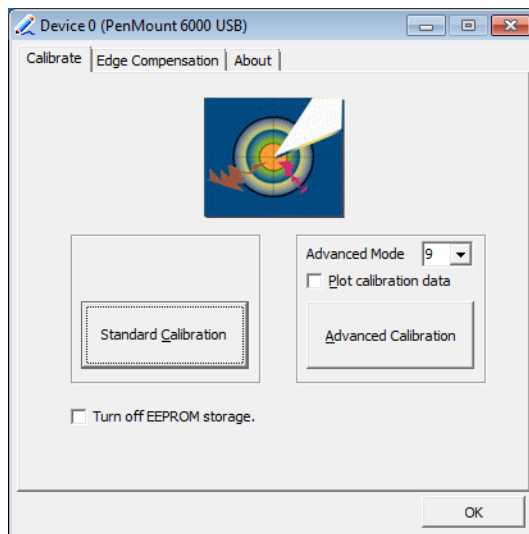

1. Insert Driver CD and follow the path to select the “\Drivers\Step 7 - Touch”.

2. Follow the installing procedure and press OK.
3. Click Start menu and select “PenMount Utilities”; and then, a “PenMount Control Panel” pops out.

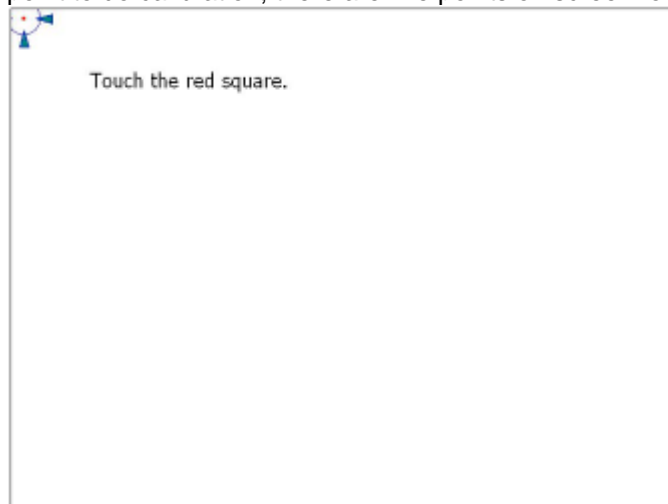

4. Select the "Standard Calibrate" tab.

5. Calibration:

To adjust the display with touch panel, click "Calibration" and follow the calibrate point to do calibration; there are five points on screen for calibration.

6. Press OK.

4.3 Embedded O.S.

The GOT5152T-834 provides the WES 7 and WE8S Embedded. The O.S. is supported devices which are listed below.

4.3.1 WES 7 & WE8S

Here are supported onboard devices:

- Onboard Multi I/O
- SATA HDD
- USB
- CRT/LCD display
- 10/100/1000 base-T Ethernet
- CFast™ or mSATA
- Onboard Audio
- Touch Screen

PenMount Touch screen

Before you can use and calibrate it, here is what you should do:

1. Set up Penmount touch device driver by executing C:\Penmount\ Windows 2000-XP V5.0\setup.exe. When the installation is finished, an icon "PM" appears on the Taskbar.
2. Calibrate Penmount touch by clicking on the "PM" icon, and the go on the calibration.
3. Restart the computer.

This page is intentionally left blank.

Appendix A

Watchdog Timer

About Watchdog Timer

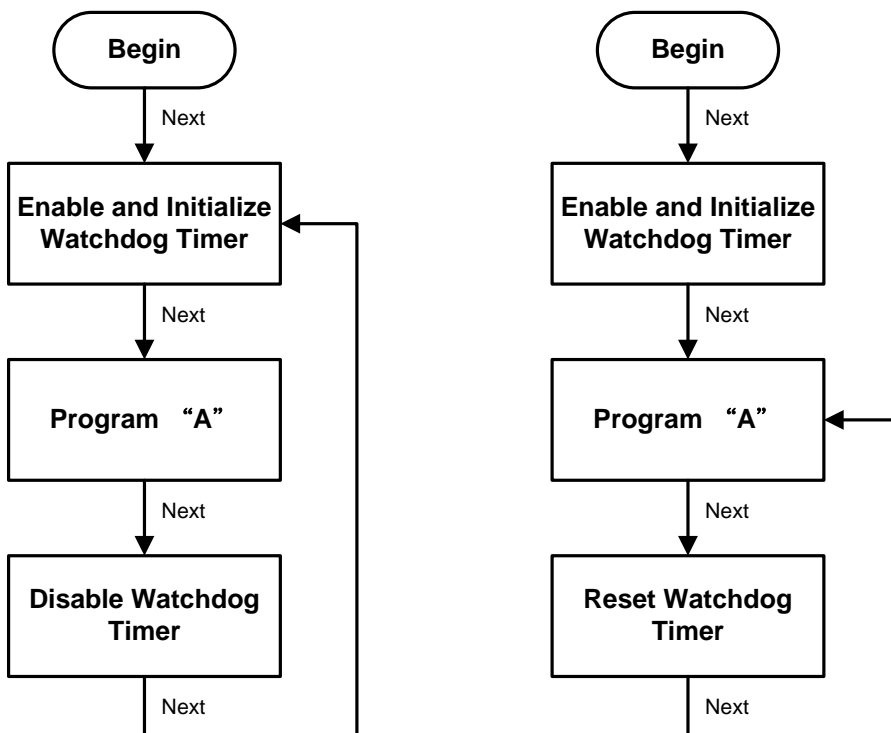

Software stability is major issue in most application. Some embedded systems are not watched by human for 24 hours. It is usually too slow to wait for someone to reboot when computer hangs. The systems need to be able to reset automatically when things go wrong. The watchdog timer gives us solution.

The watchdog timer is a counter that triggers a system reset when it counts down to zero from a preset value. The software starts counter with an initial value and must reset it periodically. If the counter ever reaches zero which means the software has crashed, the system will reboot.

How to Use Watchdog Timer

The I/O port base addresses of watchdog timer are 2E (hex) and 2F (hex). The 2E (hex) and 2F (hex) are address and data port respectively.

Assume that program A is put in a loop that must execute at least once every 10ms. Initialize watchdog timer with a value bigger than 10ms. If the software has no problems; watchdog timer will never expire because software will always restart the counter before it reaches zero.

WDT Sample Program

Enable WDT

1. Enable configuration
 - O 2E 87
 - O 2E 87
2. Select Logic device:
 - O 2E 07
 - O 2F 08
3. WDT Device Enable
 - O 2E 30
 - O 2F 01
4. Set timer unit
 - O 2E F0
 - O 2F 00 → (00: Sec; 08: Minute)
5. Set base timer:
 - O 2E F1
 - O 2F 0A → Set Reset Time (Ex.0A:10 Sec)

Disable WDT

1. Enable configuration
 - O 2E 87
 - O 2E 87
2. Select Logic device:
 - O 2E 07
 - O 2F 08
3. WDT Device Disable
 - O 2E 30
 - O 2F 00

Digital I/O Software Programming

- I2C to GPIO PCA9535PW GPIO
- I2C address: 0b01000000.

Command byte

The command byte is the first byte to follow the address byte during a write transmission. It is used as a pointer to determine which of the following registers will be written or read.

Table 4. Command byte

Command	Register
0	Input port 0
1	Input port 1
2	Output port 0
3	Output port 1
4	Polarity Inversion port 0
5	Polarity Inversion port 1
6	Configuration port 0
7	Configuration port 1

Registers 0 and 1: Input port registers

This register is an input-only port. It reflects the incoming logic levels of the pins, regardless of whether the pin is defined as an input or an output by Register 3. Writes to this register have no effect.

The default value 'X' is determined by the externally applied logic level.

Table 5. Input port 0 Register

Bit	7	6	5	4	3	2	1	0
Symbol	I0.7	I0.6	I0.5	I0.4	I0.3	I0.2	I0.1	I0.0
Default	X	X	X	X	X	X	X	X

Table 6. Input port 1 register

Bit	7	6	5	4	3	2	1	0
Symbol	I1.7	I1.6	I1.5	I1.4	I1.3	I1.2	I1.1	I1.0
Default	X	X	X	X	X	X	X	X

Registers 2 and 3: Output port registers

This register is an output-only port. It reflects the outgoing logic levels of the pins defined as outputs by Registers 6 and 7. Bit values in this register have no effect on pins defined as inputs. In turn, reads from this register reflect the value that is in the flip-flop controlling the output selection, **not** the actual pin value.

Table 7. Output port 0 register

Bit	7	6	5	4	3	2	1	0
Symbol	O0.7	O0.6	O0.5	O0.4	O0.3	O0.2	O0.1	O0.0
Default	1	1	1	1	1	1	1	1

Table 8. Output port 1 register

Bit	7	6	5	4	3	2	1	0
Symbol	O1.7	O1.6	O1.5	O1.4	O1.3	O1.2	O1.1	O1.0
Default	1	1	1	1	1	1	1	1

Registers 4 and 5: Polarity Inversion registers

This register allows the user to invert the polarity of the Input port register data. If a bit in this register is set (written with '1'), the Input port data polarity is inverted. If a bit in this register is cleared (written with a '0'), the Input port data polarity is retained.

Table 9. Polarity Inversion port 0 register

Bit	7	6	5	4	3	2	1	0
Symbol	N0.7	N0.6	N0.5	N0.4	N0.3	N0.2	N0.1	N0.0
Default	0	0	0	0	0	0	0	0

Table 10. Polarity Inversion port 1 register

Bit	7	6	5	4	3	2	1	0
Symbol	N1.7	N1.6	N1.5	N1.4	N1.3	N1.2	N1.1	N1.0
Default	0	0	0	0	0	0	0	0

Registers 6 and 7: Configuration registers

This register configures the directions of the I/O pins. If a bit in this register is set (written with '1'), the corresponding port pin is enabled as an input with high-impedance output driver. If a bit in this register is cleared (written with '0'), the corresponding port pin is enabled as an output. At reset, the device's ports are inputs.

Table 11. Configuration port 0 register

Bit	7	6	5	4	3	2	1	0
Symbol	C0.7	C0.6	C0.5	C0.4	C0.3	C0.2	C0.1	C0.0
Default	1	1	1	1	1	1	1	1

Table 12. Configuration port 1 register

Bit	7	6	5	4	3	2	1	0
Symbol	C1.7	C1.6	C1.5	C1.4	C1.3	C1.2	C1.1	C1.0
Default	1	1	1	1	1	1	1	1

Appendix B

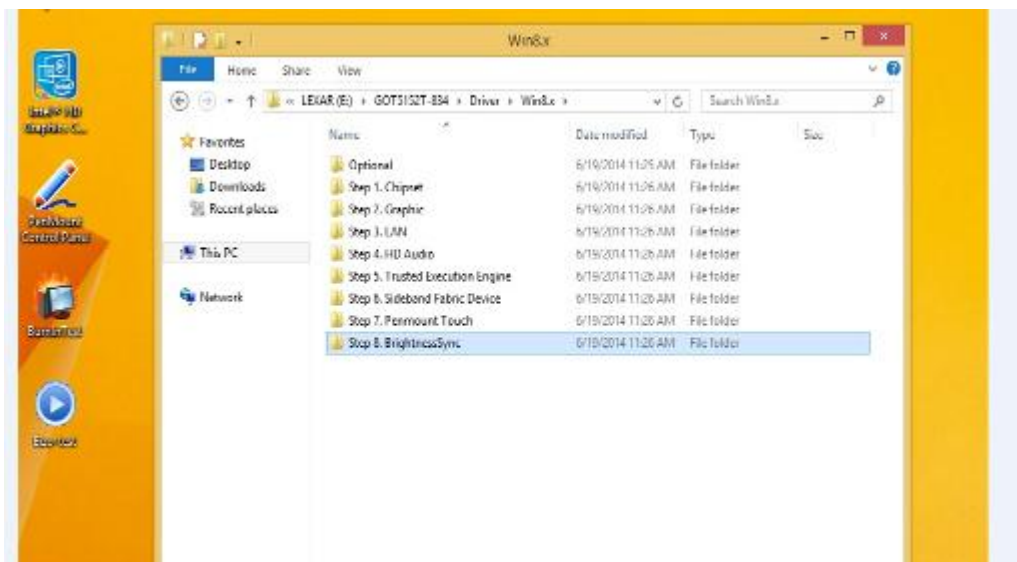

Backlight Control

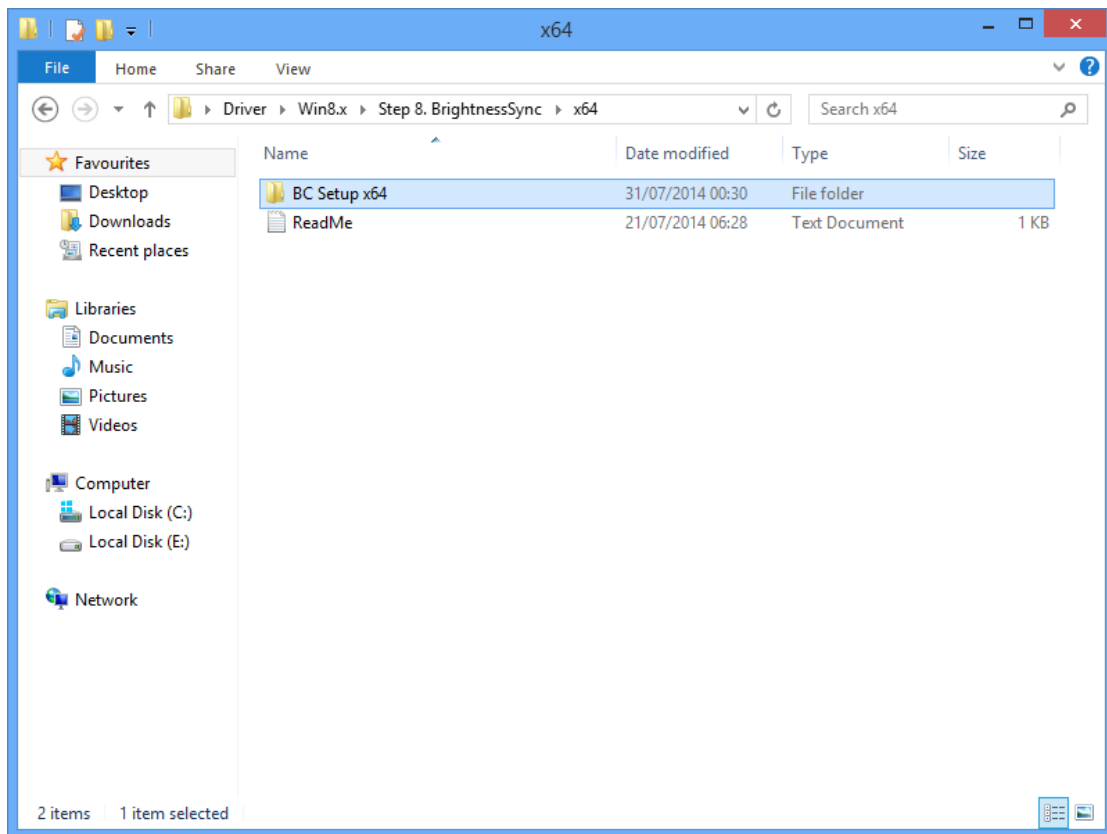

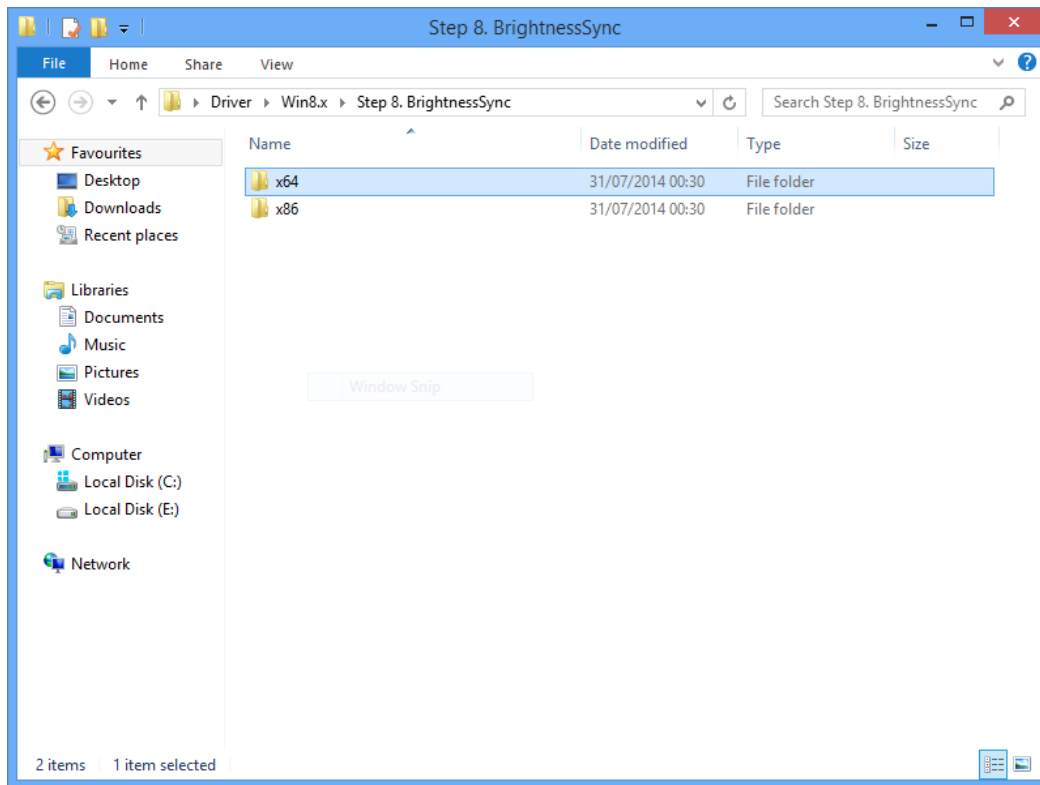

About Backlight Control

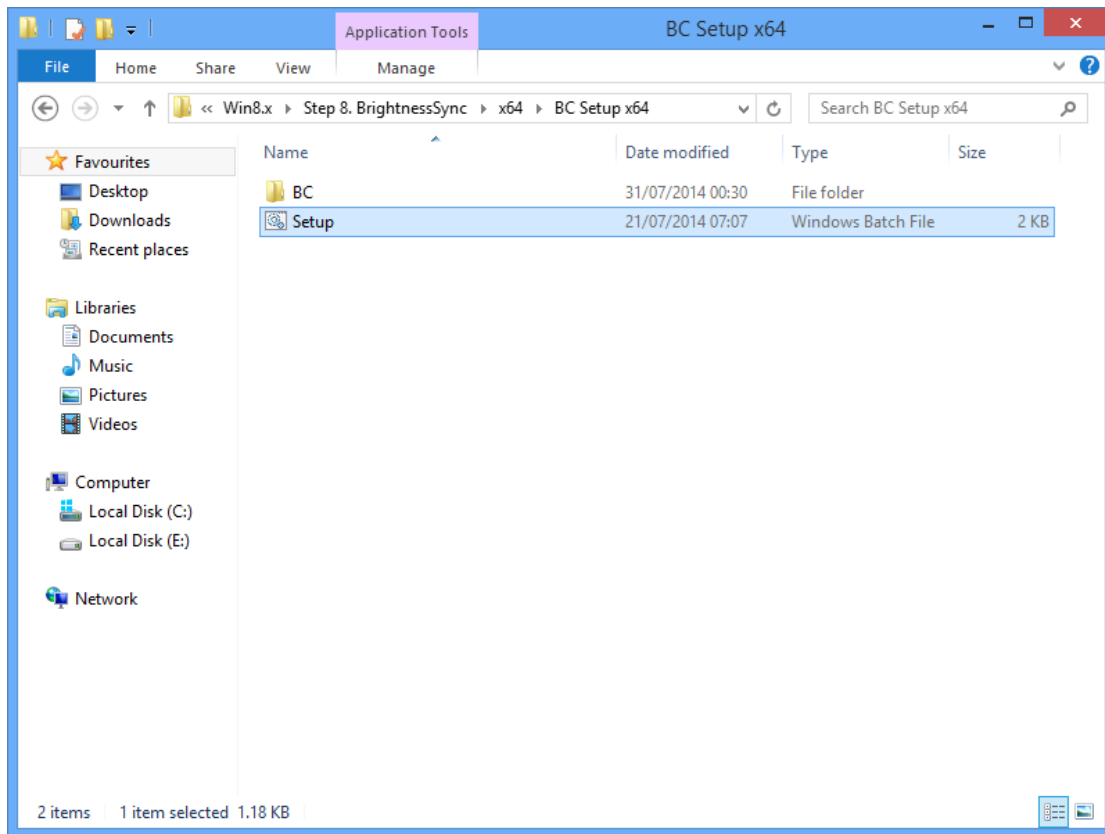

Axiomtek offers the backlight control tool under Windows 7 and Windows 8, people can adjust the panel backlight depending on your personal taste and the amount of ambient light in the room after installing the backlight control tool.

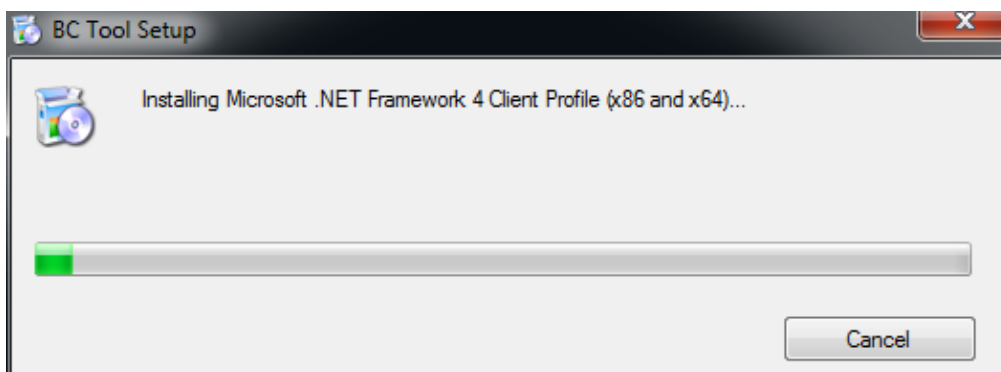

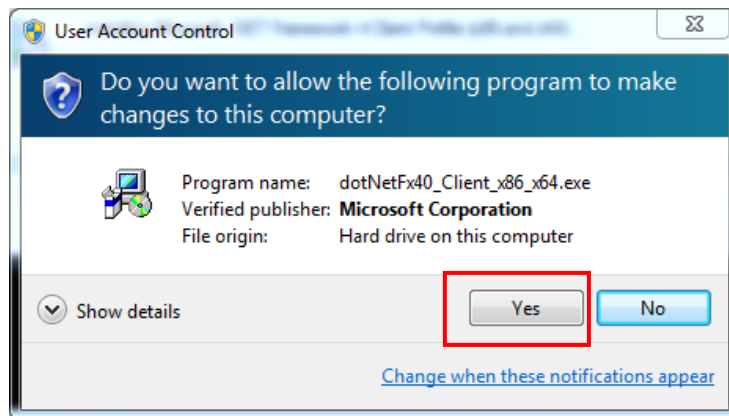

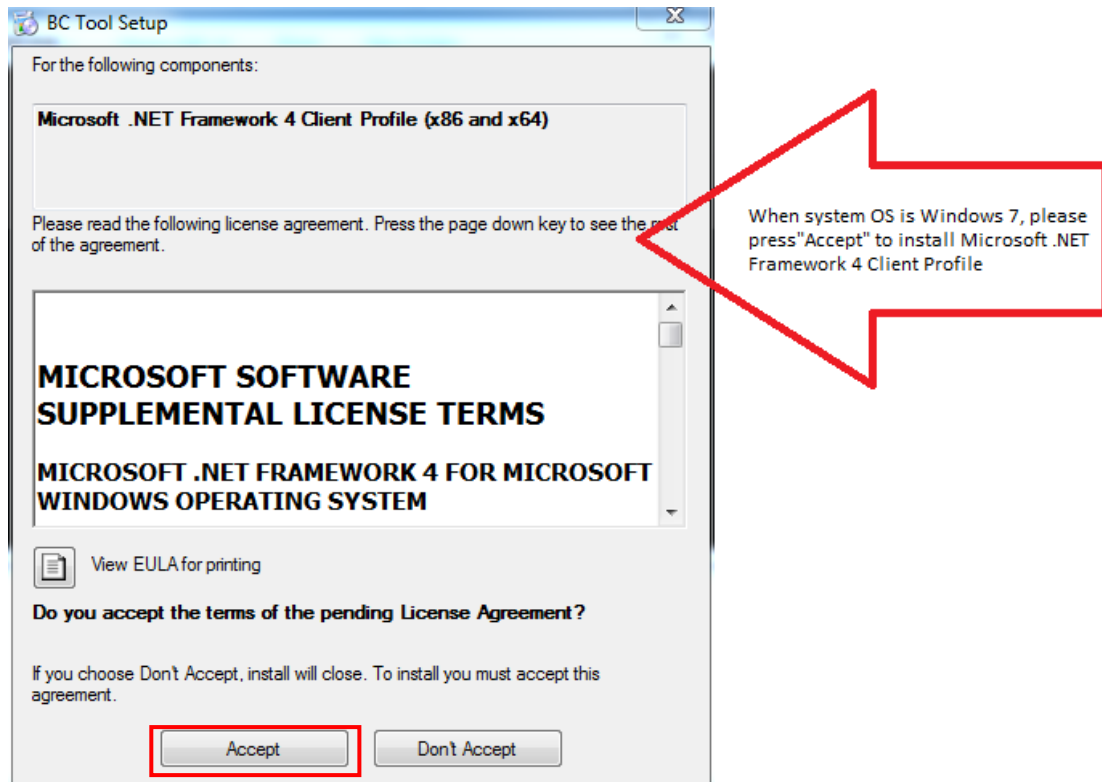

How to Use Backlight Control

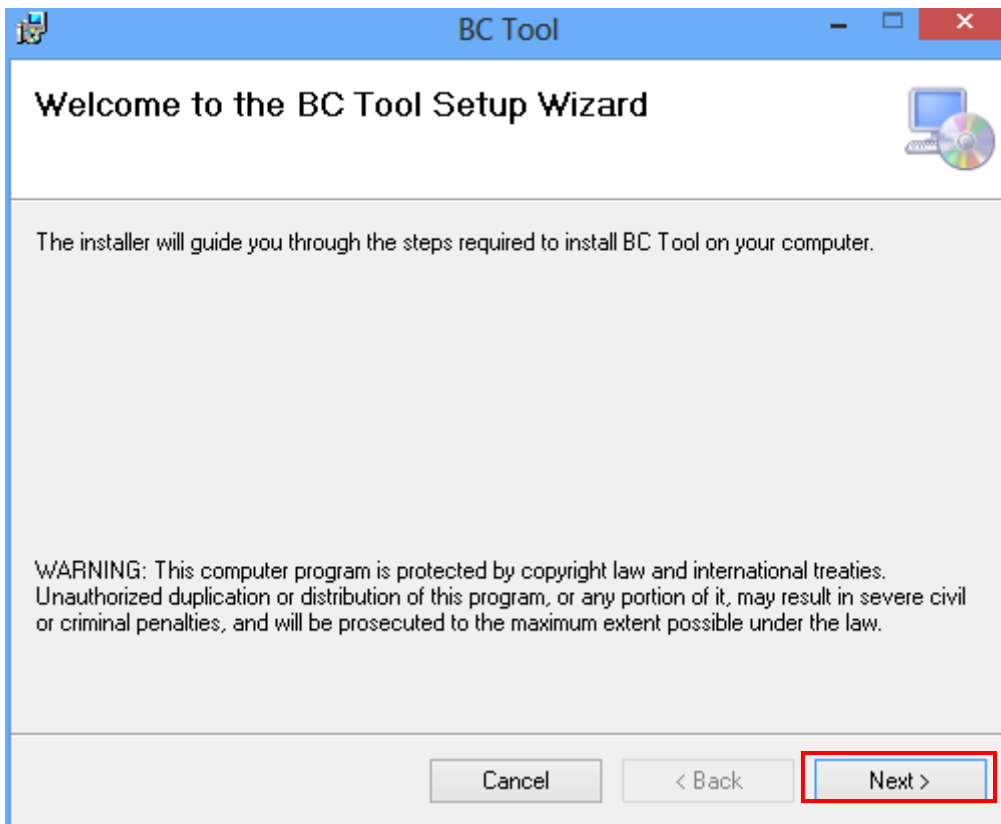

- Step 1** According to the OS version, please insert the driver CD and follow the path to select the proper driver, “\Driver\Win8.x\Step 8 – BrightnessSync” or “\Driver\Win7\Step 8 - BrightnessSync”.

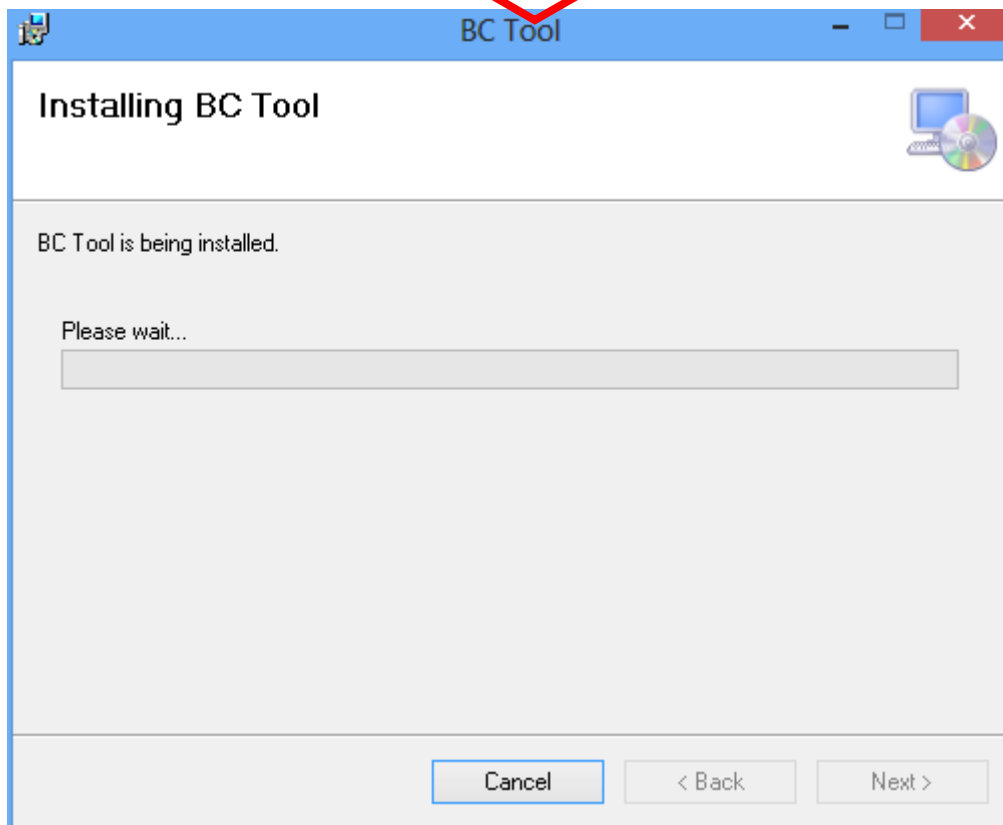

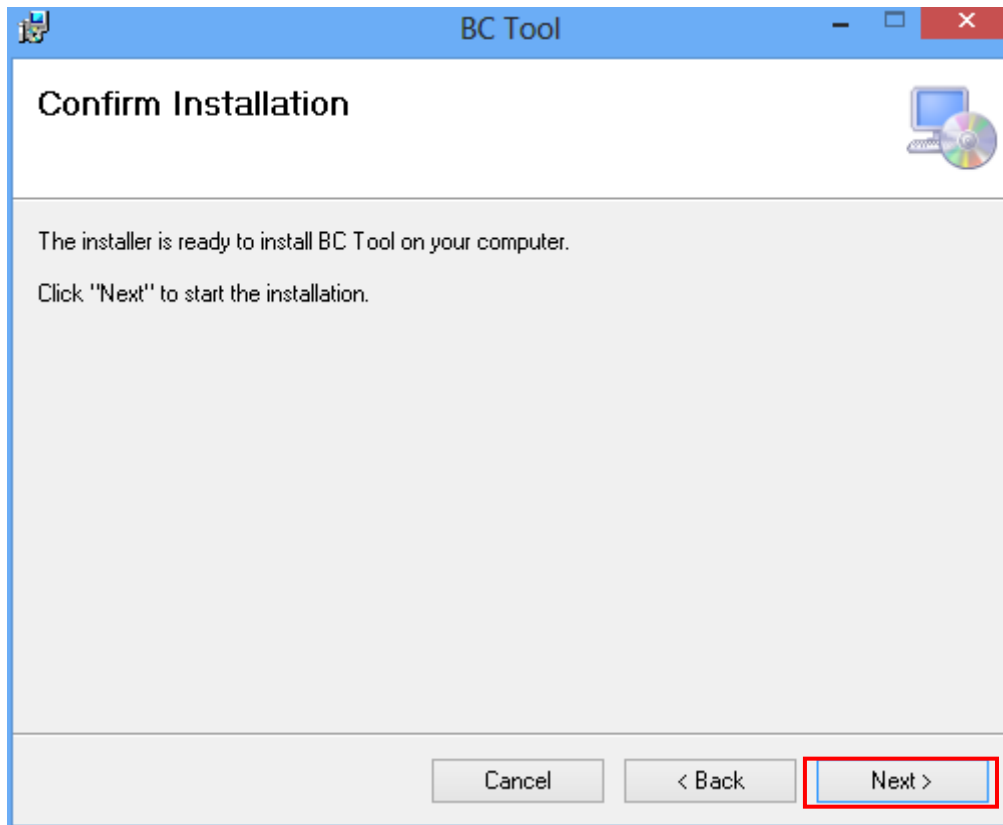

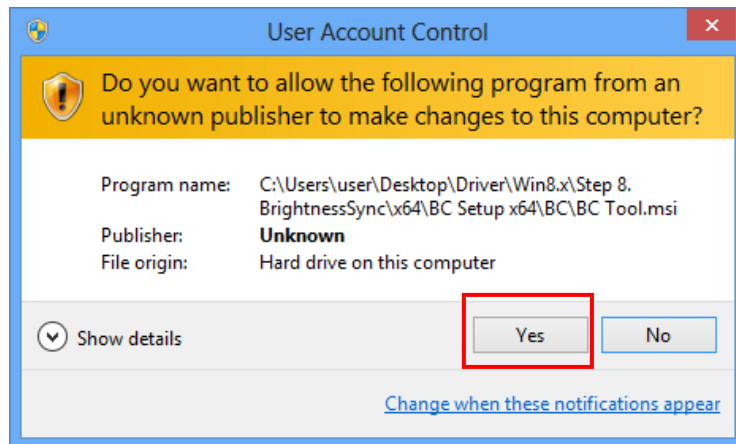

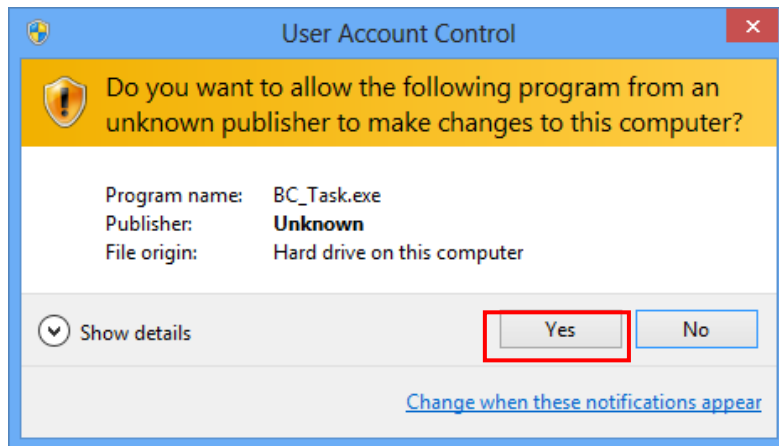

Step 2 Follow the installing procedures and press "Close".

Step 3 System auto reboot, installation completed.

Step 4 Select “△” icon then find out the “Axiomtek” to ensure the brightness driver is installed appropriately.

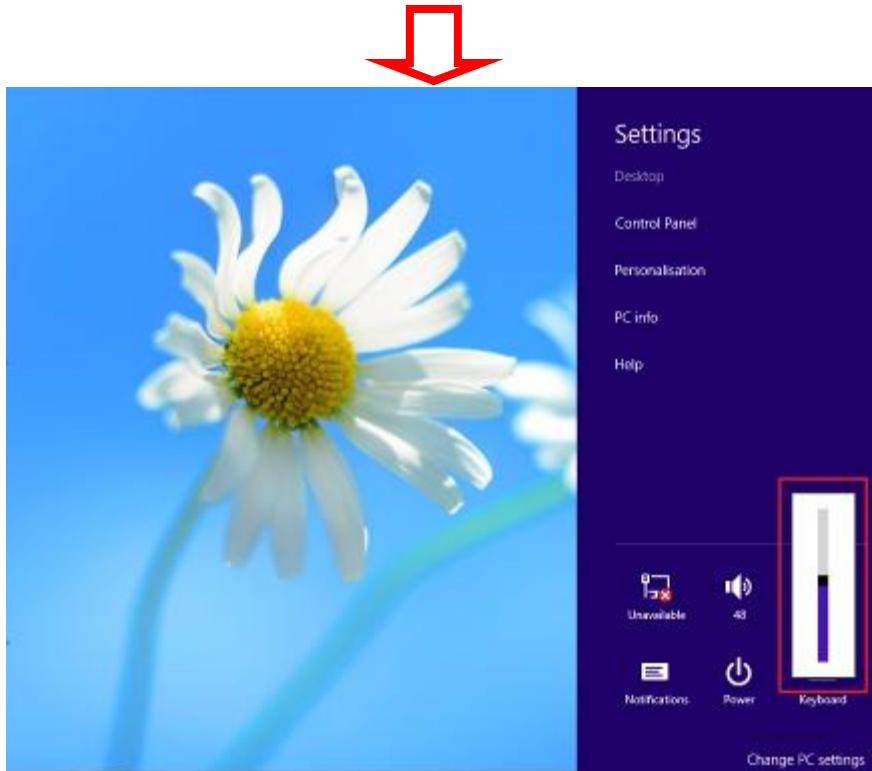

Step 5 How to use the brightness Control

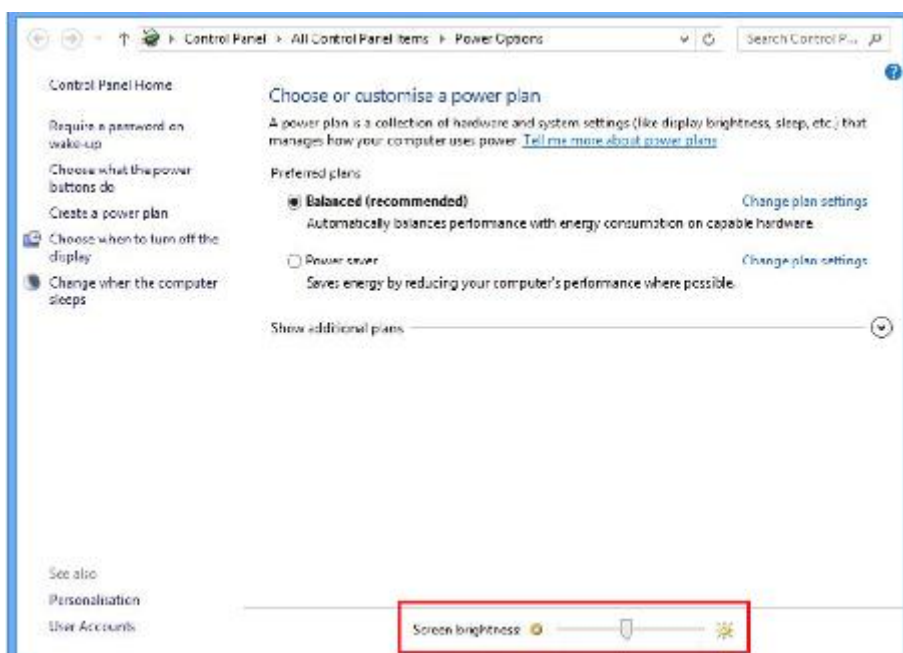

There are two ways to adjust the display brightness.

Step 5.1 Click the “Brightness” to adjust the display brightness with the bar. *(For Windows 8.x only.)*

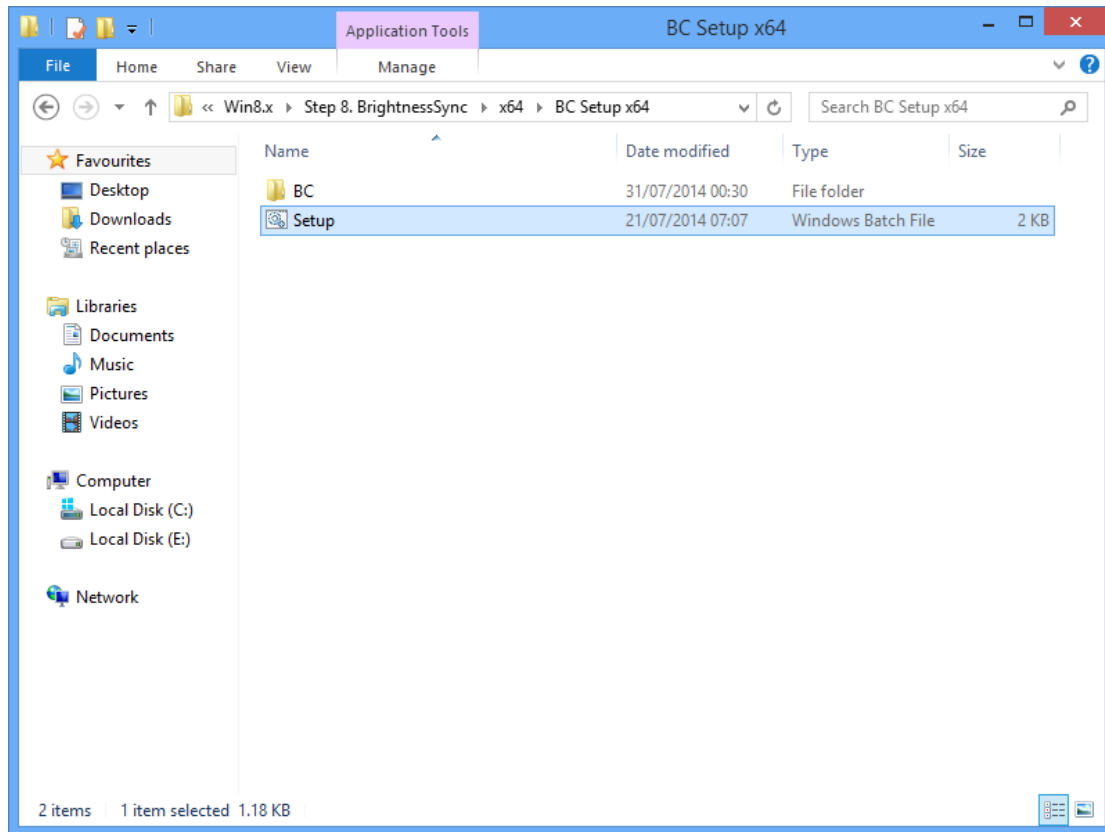

Step 5.2. Click the “Control Panel” then select “Power Options” to adjust the display brightness.

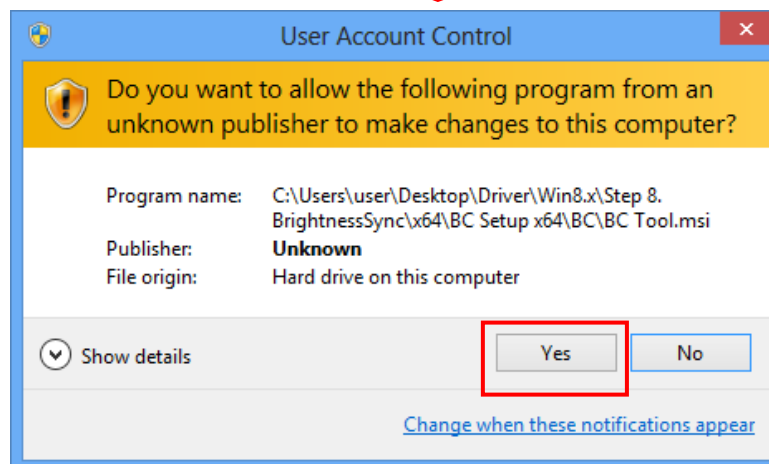

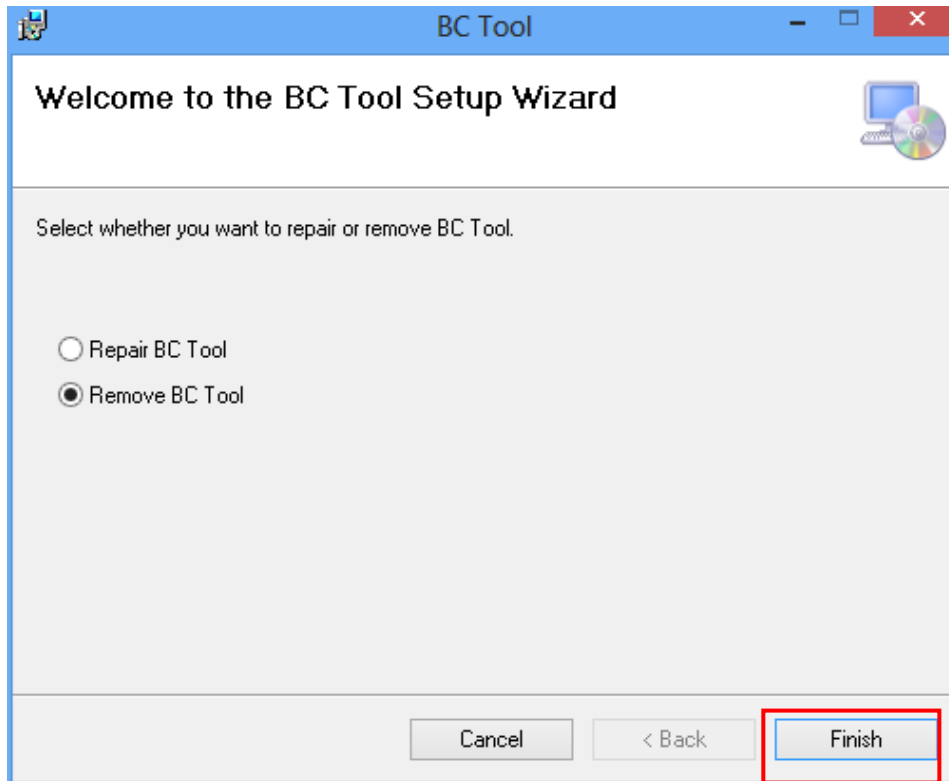

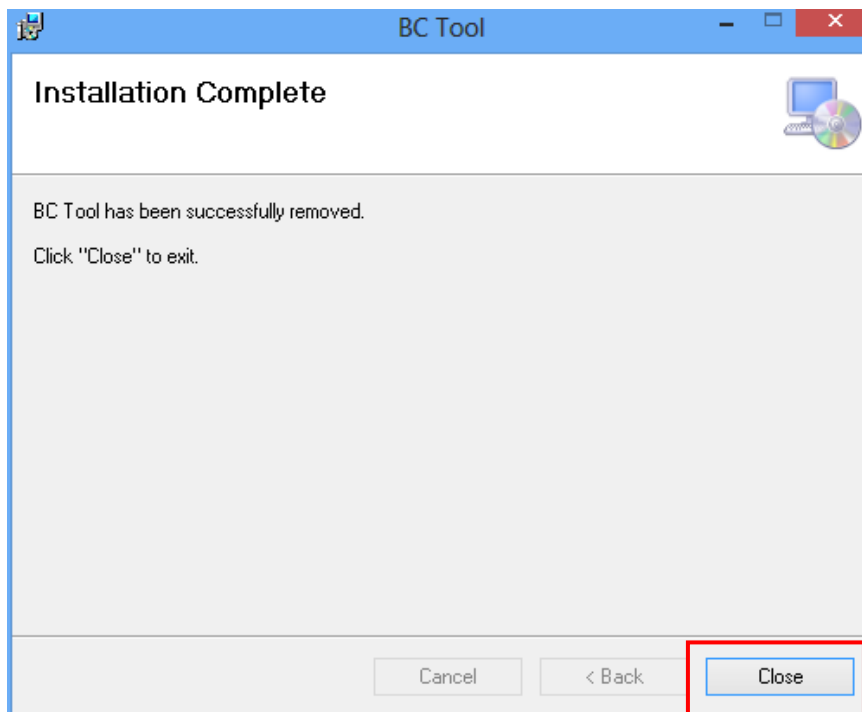

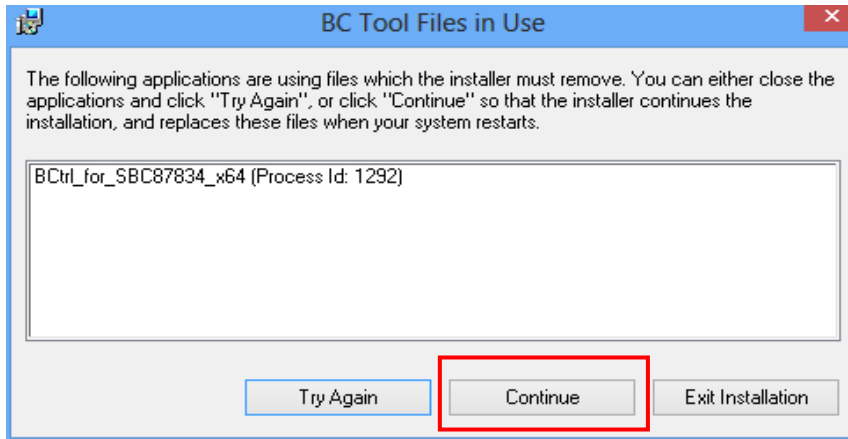

Removed Brightness Control Tool

Step 1 According to the OS version, please insert the driver CD and follow the path to select the proper driver, “\Driver\Win8.x\Step 8 – Setup” or “\Driver\Win7\Step 8 - Setup”.

Step 2 Follow the procedures and press "Close".

Step 3 System auto reboot, uninstallation completed.
