Safety Precautions

Before getting started, please read the following important safety precautions.

- 1. Be sure to ground yourself to prevent static charge when installing the internal components. Use a grounding wrist strap and place all electronic components in any static-shielded devices. Most electronic components are sensitive to static electrical charge.
- 2. Disconnect the power cord from the P100 series prior to any installation. Be sure both the system and the external devices are turned off. Sudden surge of power could ruin sensitive components. Make sure the P100 series is properly grounded.
- 3. Do not open the system's top cover. If opening the cover for maintenance is a must, only a trained technician is allowed to do so. Integrated circuits on computer boards are sensitive to static electricity. To avoid damaging chips from electrostatic discharge, observe the following precautions:
 - Before handling a board or integrated circuit, touch an unpainted portion of the system unit chassis for a few seconds. This will help to discharge any static electricity on your body.
 - When handling boards and components, wear a grounding wrist strap available from most electronic component stores.

Section 1 Introduction

This section contains general information and detailed specifications of the P115-ADL-TRA, including the following subsections:

Figure 1-1 Front View of the P115-ADL-TRA

- General Description
- Specification
- Dimensions
- I/O Outlets
- Package List

1.1 General Description

The P115-ADL-TRA adopts a 15-inch XGA TFT LCD with 300-nits brightness, a high performance LGA1700 socket for 12th generation Intel® Core[™] i7/i5/i3 & Pentium® processor, and an Intel® H610 Express chipset to provide excellent computing performance. Furthermore, P115-ADL-TRA supports optional WLAN module & antenna for wireless connectivity.

Industrial-grade front bezel

The P115-ADL-TRA adopts industrial-grade front bezel which incorporates the advantages of light weight, high degree of hardness, better heat releasing, easy-to-shape and anti-corrosion. Therefore, the P115-ADL-TRA is especially suitable for most rugged industrial environments.

Expandable for PCIe

P115-ADL-TRA comes with one PCIe x16 for expansion purpose. User can easily plug in PCIe card as required.

WLAN Antenna Supported

The P115-ADL-TRA supports a WLAN module (optional) antenna for wireless network connectivity.

High Performance computing: 12th Generation Intel[®] Core[™] Processors

The P115-ADL-TRA is powered by LGA1700 Socket 12th Generation Intel® Core™ i7/i5/i3, Pentium® processors which provide powerful performance and less power consumption. The latest Intel® Alder lake-S platform offers reliable and stable performance suitable for rugged environments.

1.2 Specifications

1.2.1 System Specifications

Main CPU Board

• CPU

LGA1700 socket 12th generation Intel® Core™ i7/i5/i3 and Pentium® processors, up to 65W

- Chipset
 - ➢ Intel® H610
- System Memory

2 x 260-pin DDR4-3200/2666/2400MHz SO-DIMM, up to 64GB

- BIOS
 - AMI BIOS via SPI interface.

I/O System

- Standard I/O

 - 1 x flexible I/O windows, by option 2x RS232,DIO, CAN, LAN
- Ethernet
 - LAN1: 1000/100/10Mbps Gigabit/Fast Ethernet supports Wake-on-LAN, PXE with Intel® i219V.
 - LAN2: 2500/1000/100/10Mbps Gigabit/Fast Ethernet supports Wake-on-LAN, PXE with Intel® i225V.

- Expansion
 - > 1 x PCIe x16 slot.

Note: Supports dimensions of standard half size PCIE card. (Max. up 167.65mm x 111.15mm x 18.71mm)

- > 1 x PCI-Express Mini Card USB + SATA signal (USB+PCIe signal by option)
- > 3 x SMA Type Antenna Hole
- > 1 x M.2 Key E type 2230 with PCIe x1 and USB2.0.
- Storage
 1 x 2.5" SATA SSD (supports 7mm and 9.5mm)
- Power connector
 1 x AC Socket for power input

1.2.2 Mechanical/Environmental Specifications

- 15" XGA (1024x768) LCD 300 nits with LED backlight
- 5-wire resistive touch
- Aluminum w/ IP65/NEMA 4 rugged protection
- Net Weight
 - ■5.4 Kgs (11.90 lbs)

Section 2 Hardware and Installation

The P115-ADL-TRA provides rich I/O ports and flexible expansion options to meet different demands. The Section explains how to install the hardware.

- Packing List
- System Layout
- SSD Installation
- DRAM Installation
- PCIe Mini-Card module Installation (optional)
- Add-on Card Installation
- Mountings: Panel / Wall / Desktop / VESA
- Rear I/O
- Jumper Settings
- Connectors

2.1 Packing List

The package bundled with the P115-ADL-TRA should contain the following items:

- P115-ADL-TRA x 1
- Panel mount kit x 10
- Wall mount (optional)
- Power cord x 1

If any above-mentioned item is missing, please contact an Axiomtek distributor immediately.

2.2 System Layout

To open the P115-ADL-TRA, simply unscrew the two screws on the rear cover and pull the cover backward as shown in Figure 2-1.

Figure 2-1 Remove Back Cover of the P115-ADL-TRA

Once the back cover is removed, the internal system should look like Figure 2-2.

Figure 2-2 After Removing the back cover of the P115-ADL-TRA, install memory, storage and any other peripheral.

2.3 SSD Installation

The P115-ADL-TRA provides a convenient SSD bracket for users to install one 2.5" SATA SSD. Please follow the steps:

- Step 1 Refer section 2.1 to open the back cover.
- Step 2 Unscrew four screws to take off the SSD bracket.

Step 3 Fix the SSD on bracket by the screws.

▲1 x 2.5" SATA SSD Bracket

▲ Fix the 2.5" SSD on the back of bracket

Step 4 Fix the SSD bracket onto the main base.

Step 5 Plug the power and SATA cables to connectors. Installation completes.

2.4 DRAM Installation

The P115-ADL-TRA provides one 260-pin DDR4 SO-DIMM socket that supports system memory up to 32GB. Please follow the steps below to install the memory modules:

Step 1 Refer to section 2.1 to open the back cover and find the DIMM socket on the mainboard (MANO560).

- Step 2 Install the SO-DIMM module into the slot and press it firmly down until it seats correctly.
- Step 3 The slot latches are levered upwards and latch on to the edges of the SO-DIMM.

2.5 PCIe Mini-Card module Installation (optional)

The P115-ADL-TRA supports PCIe Mini-Card module to establish wireless connection. When installing the wireless LAN module, refer to the following instructions and illustration:

Step 1 Refer to section 2.1 to open the back cover and locate PCIe Mini-Card slot.

Step 2 Insert wireless LAN module to the Mini card slot and fixing it by one screw.

Step 4 Lift the rubber stopper from the top of back cover.

Step 5 Install the antenna on the antenna connector.

Add-on Card Installation 2.6

The P115-ADL-TRA provides one PCIe x16 slot for expansion. The system can accommodate half-size riser cards. To install the riser card, refer to the following figure and instructions below:

- Step 1 Refer section 2.1 to open the back cover and unscrew the one screw to remove the fixing bracket.
- Step 2 Insert the riser card into the socket firmly until it is installed completely.

Step 3 Secure the metal bracket of the card to the system case with one screw. Installation complete.

NOTE: Please use the standard size of add-on card to avoid conflicts with the mechanism.

2.7 Mountings: Panel / Wall / Desktop / VESA

There are four mounting options for the P115-ADL-TRA, including Panel/Wall/Desktop/VESA mount.

2.7.1 VESA-ARM / Wall-mount / Desktop-mount

The P115-ADL-TRA can be installed by way of VESA mount which is in the dimensions of 100x100 mm. Simply fix four screws to fasten the kit from the back cover, as shown in Diagram 2-3.

▲ VESA mount (back cover)

2.7.2 Panel-mount Kit Assembly

The P115-ADL-TRA is designed for panel mount. To mount the P115-ADL-TRA, the standard set of mounting kit (10pcs included in the system packaging) is needed.

2.8 Rear I/O

Table 2-1 Jumpers/ Headers/ Connectors associated with each Label

	Jumpers/Headers/Connectors					
1	PCI-Express x16 Slot (CN20)	10	Audio Header (CN52)			
2	M.2 Key E Socket (CN22)	11	USB 3.2 GEN1 Stack Port (CN10)			
3	PCI-Express Mini Card Connector (CN21)	12	VGA Connector (CN34)			
4	DDR4 SO-DIMM Connectors (DIMM1, DIMM2)	13	HDMI1.4 Connector (CN33)			
5	SATA 3.0 Connector (CN7)	14	DisplayPort1.3 Connector (CN32)			
6	Clear CMOS (JP3)	15	COM1and COM2 D-Sub Connector (CN1)			
7	AT/ATX Power Mode Select Jumper (JP5)	16	LAN1(RJ-45) and USB 2.0 Connector (CN19)			
8	USB 2.0 Header (CN62)	17	LAN2(RJ-45) and USB 2.0 Connector (CN11)			
9	COM VDD Select Jumper (JP1)	18	Audio Jack (CN82)			

To identify the first pin of a header or jumper, please refer to the following information:
Usually, there is a thick line or a triangle near the header or jumper pin 1.

Pin 14-130000

Squared, which you can find on the back of the motherboard, is usually used for pin 1.

Jumper Settings 2.9

Jumper is a small component consisting of jumper clip and jumper pins. Install jumper clip on 2 jumper pins to close. And remove jumper clip from 2 jumper pins to open. The following illustration shows how to set up jumper.

Diagram 2-1 Definitions of Pin Settings

Before applying power to the P115-ADL-TRA series, please make sure the jumpers are in default positions which are defined as follows:

NOTE: In case that default jumper setting needs to be changed, please make any change under the power-off condition.

Table	2-2	Jumper	Settings
-------	-----	--------	----------

Jumper	Description	Setting
ID1	COM Data/Power Select	3-5 Close
JPT	Default: RS-232 Data	4-6 Close
JP3	Clear CMOS	1-2 Close

IP5	AT/ATX Power Mode Select	1-2 Close
515	Default: ATX Mode	1-2 01036

2.9.1 COM1 Data/Power Select (JP1)

This is a 3x2-pin (pitch=2.00mm) jumper. The COM1 port has +5V power capability on DCD and +12V on RI by setting JP1.

Table 2-	3 Jumper	Settings	for JP1
----------	----------	----------	---------

Function	Setting	
Power: Set COM1 pin 1 to +5V	1-3 close	246
Data: Set COM1 pin 1 to DCD (Default)	3-5 close	
Power: Set COM1 pin 9 to +12V	2-4 close	
Data: Set COM1 pin 9 to RI (Default)	4-6 close	135

Hardware and Installation

2.9.2 Clear CMOS (JP3)

This jumper allows you to clear the Real Time Clock (RTC) RAM in CMOS. You can clear the CMOS memory of date, time, and system setup parameters by erasing the CMOS RTC RAM data. The onboard button cell battery powers the RAM data in CMOS, which includes system setup information such as system passwords.

To erase the RTC RAM:

- 1. Turn OFF the computer and unplug the power cord.
- 2. Remove the onboard battery.
- 3. Move the jumper clip from pins 1-2 (default) to pins 2-3. Keep the clip-on pins 2-3 for about
- $5\sim10$ seconds, then move the clip back to pins 1-2.
- 4. Re-install the battery.
- 5. Plug the power cord and turn ON the computer.
- 6. Hold down the key during the boot process and enter BIOS setup to re-enter data.

Table 2-4 Jumper Settings for JP3

Function	Setting	
Normal operation (Default)	1-2 close	123
Clear CMOS	2-3 close	

2.9.3 AT/ATX Power Mode Select (JP5)

This 3-pin (pitch=2.0mm) jumper allows you to select AT or ATX power mode.

Table 2-5 Jumper Settings for JP5

Function	Setting	
ATX mode (Default)	1-2 close	
AT mode	2-3 close	123

2.10 Connectors

Signals go to other parts of the system through connectors. Loose or improper connection might cause problems, please make sure all connectors are properly and firmly connected. Here is a summary table showing connectors on the hardware.

Connector	Description
CN1	COM1 and COM2 D-Sub Connector
CN7	SATA 3.0 Connector

Section 3 AMI BIOS Setup Utility

The AMI UEFI BIOS provides users with a built-in setup program to modify basic system configuration. All configured parameters are stored in a flash chip to save the setup information whenever the power is turned off. This Section provides users with detailed description about how to set up basic system configuration through the AMI BIOS setup utility.

3.1 Starting

To enter the setup screens, follow the steps below:

- 1. Turn on the computer and press during the Power On Self-Test (POST) to enter BIOS setup, otherwise, POST will continue with its test routines.
- 2. Once you enter the BIOS, the main BIOS setup menu displays. You can access the other setup screens from the main BIOS setup menu, such as the Advanced and Chipset menus.

It is strongly recommended that you should avoid changing the chipset's defaults. Both AMI and your system manufacturer have carefully set up these defaults that provide the best performance and reliability.

3.2 Navigation Keys

The BIOS setup/utility uses a key-based navigation system called hot keys. Most of the BIOS setup utility hot keys can be used at any time during the setup navigation process. These keys include <F1>, <F9>, <F10>, <F11>, <F12>, <Enter>, <ESC>, <Arrow> keys, and so on.

NOTE: Some of the navigation keys differ from one screen to another.

Hot Keys	Description
→← Left/Right	The Left and Right <arrow> keys allow you to select a setup screen.</arrow>
∕↑↓ Up/Down	The Up and Down <arrow> keys allow you to select a setup screen or sub screen.</arrow>
Enter	The <enter> key allows you to display or change the setup option listed for a particular setup item. The <enter> key can also allow you to display the setup sub screens.</enter></enter>
+– Plus/Minus	The Plus and Minus <arrow> keys allow you to change the field value of a particular setup item.</arrow>
F1	The <f1> key allows you to display the General Help screen.</f1>
F9	The <f9> key allows you to Load Optimized Defaults.</f9>
F10	The <f10> key allows you to save any changes you have made and exit Setup.</f10>
F11	The <f11> key allows you to print the BIOS setting screen.</f11>
F12	The <f12> key allows you to update BIOS.</f12>
Esc	The <esc> key allows you to discard any changes you have made and exit the Setup. Press the <esc> key to exit the setup without saving your changes.</esc></esc>

3.3 Main Menu

When you first enter the setup utility, you will enter the Main setup screen. You can always return to the Main setup screen by selecting the Main tab. System Time/Date can be set up as described below. The Main BIOS setup screen is shown below.

• Secure Boot

Secure Boot is a security standard to help ensure that devices will only boot using software trusted by original equipment manufacturers (OEMs). When the computer starts, this firmware checks the signature of every boot software, including UEFI firmware drivers (also called option Rom), EFI applications, and operating systems. If the signature is valid, the computer will boot up, and this firmware allows you to control the operating system.

3. Please follow the steps below to encrypt your storage device:

4		×
4	RitLocker Drive Encryption (C:)	
	Choose how much of your drive to encrypt	
	If you're setting up BitLocker on a new drive or a new PC, you only need to encrypt the part of the drive that's currently being used. BitLocker encrypts new data automatically as you add it.	
	If you're enabling BitLocker on a PC or drive that's already in use, consider encrypting the entire drive. Encrypting the entire drive ensures that all data is protected—even data that you deleted but that might stil contain retrievable info.	I
ſ	Encrypt used disk space only (faster and best for new PCs and drives)	
2	○ Encrypt entire drive (slower but best for PCs and drives already in use)	
	2 Next Cancel	
2		×
÷	RitLocker Drive Encryption (C:)	
	Choose which encryption mode to use	
	Windows 10 (Version 1511) introduces a new disk encryption mode (XTS-AES). This mode provides additional integrity support, but it is not compatible with older versions of Windows.	
	If this is a removable drive that you're going to use on older version of Windows, you should choose Compatible mode.	
	If this is a fixed drive or if this drive will only be used on devices running at least Windows 10 (Version 1511) or later, you should choose the new encryption mode)
1	New encryption mode (best for fixed drives on this device)	
	○ <u>C</u> ompatible mode (best for drives that can be moved from this device)

4	RitLocker Drive Encryption (C:)	0
	Are you ready to encrypt this drive?	
	Encryption might take a while depending on the size of the drive.	
	You can keep working while the drive is being encrypted, although your PC might run more slowly.	
	Run BitLocker system check	
	The system check ensures that BitLocker can read the recovery and encryption keys correctly before encrypting the drive.	
	BitLocker will restart your computer before encrypting.	
	Note: This check might take a while, but is recommended to ensure that your selected unlock method works without requiring the recovery key.	ł
	Start <u>e</u> ncrypting Cancel	

Now, the system prompts that the operating system drive encryption is in progress, and the encryption progress is checked.
